Cloud-based SCM is driving gains in revenue, efficiency and productivity. Here are six reasons why you should make the switch now.

1. Agility

SCM Cloud allows you to quickly and securely deploy new services and capabilities, and easily scale to meet rapidly changing demand.

2. Completeness and connectivity

Open and seamless integration with IT solutions (financial systems, mobile and IoT devices, etc.) enables real-time collaboration and a single source of truth.

3. Security

Cloud solutions support best-in-class security features, such as encryption, virus scanning and whitelist support.

4. Ease of use

You’ll benefit from the outsourcing of management, maintenance, and upgrades. And from intuitive user experiences, accurate analytics, and social collaboration tools—all accessed anywhere, at any time, and from virtually any device.

5. Cost and efficiency

On top of low upfront investments, more affordable upgrades and new capability rollouts make adapting to changes far less expensive.

6. Fast, flexible, and safe deployment

The best solutions offer a seamless, incremental transition where you select elements that deliver the greatest value and implement at the right pace for your organization.
