The accurate and timely submission of Suspicious Activity Reports (SAR's) with regulators and law enforcement officials continues to be an integral part of the war on financial crimes like fraud, money laundering, terrorist financing, and drug trafficking. Oracle Financial Services Regulatory Reporting assists financial institutions in information gathering, and generation and filing of SAR reports with regulatory bodies as part of an integrated financial crime and compliance management program.

Global Coverage of Regulatory Reporting Requirements

Money laundering and fraud are global issues. Financial institutions, today, operate in an increasingly global market but still must maintain compliance with local rules and regulations regarding financial crime and compliance. Although regulatory bodies around the world are working towards the same goals, they will vary in process and approach to best suit their specific locale so that while filing regulatory reports for suspicious activity is a standard practice in all jurisdictions and geographies, the format of these reports and processes by which to file them, will vary.

Furthermore, the number of financial institutions simultaneously conducting business in multiple jurisdictions continues to increase and will require the ability to meet all local regulatory reporting guidelines specific to each business jurisdiction.

Oracle Financial Services Regulatory Reporting provides a single, global regulatory reporting approach to address suspicious activity reporting requirements across different countries and jurisdictions. As part of this coverage, the Oracle Financial Services Regulatory Reporting supports:

- **Pre-Defined Mapping** of business information and investigation information to the applicable jurisdiction-specific regulatory reporting format.
- **Different Report Formats** for generating a suspicious activity report, as mandated by local regulatory bodies. Some examples are PDF, XML, MS Excel, etc.
- **Pre-Configured Controls** for supporting guidelines and specifications defined by the local regulatory body. This ensures compliance with SAR reporting mandates and ensures error-free report submission to regulators.

Integrated with Investigation Process

An AML or fraud prevention program has three important steps:

- **Detect** suspicious or fraudulent behavior using behavior detection or transaction monitoring capabilities.
- **Investigate** potential suspicious or fraudulent activity.
- **Report** the activity and its details to regulatory bodies, senior management and other required agencies.
The findings during detection and investigation process are included in describing the suspicious activity in a SAR. Increasingly, it is important that the information gathered during detection and investigation steps is automatically and consistently made available for reporting purposes.

Oracle Financial Services Regulatory Reporting is integrated with Oracle Financial Services' Behavior Detection Platform and Case Management solutions allowing information gathered during the detection and investigation steps to be available when preparing suspicious activity reports. Utilizing a services based approach, the solution can plug into additional investigation tools that might be in use for other financial crime programs or lines of business. This approach enables financial institutions to:

- establish the right controls, depending on their business process
- ensure that data integrity is maintained throughout the investigative life cycle
- generate reports that comply with all SAR specifications, as defined by the local regulatory bodies.

Comprehensive Report Management Functions

A SAR report is an important communication to regulators and law enforcement agencies and since it involves reporting on potentially suspicious or fraudulent behavior, it is important that the report building and submission process is supervised to ensure accurate and timely reporting.

Oracle Financial Services Regulatory Reporting offers comprehensive report management functions:

- **Data & Format Validation** functions ensure all required data is available for building reports
- **Comprehensive Error Reporting** functions allow business users to identify missing information and/or incorrect formatting
- **Workflow** functions help control report approvals ensuring that supervisors have performed required internal reviews before submission.
- **Complete Audit** function ensures that the complete history of the report handling process is recorded for evidentiary purposes.

These functions ensure that the end report is accurate, properly reviewed and approved for submission to external organizations and helps institutions reduce the overall cost of compliance.

“Future-Proof” Your Compliance Investment

Oracle Financial Services Regulatory Reporting operates within the Oracle Financial Services Financial Crime and Compliance family of GRC solutions, the first comprehensive set of applications to meet the particular needs of the financial services community. This family comprises of Oracle’s best-in-class Oracle Financial Services risk and compliance behavior detection solutions for Anti-Money Laundering, Fraud, Know Your Customer, and Trading and Broker Compliance applications. It surrounds these point solutions to provide an end-to-end solution that leverages a robust data model and comprehensive dashboard capabilities to deliver a single transparent, holistic view of all Financial Crime and Compliance related activities across the enterprise.

Oracle Financial Services helps you to identify operational inefficiencies that increase noncompliance risks and overall compliance costs.

The unified Oracle Financial Services Financial Crime and Compliance family of applications
helps you manage today's tactical risk and compliance problems while future-proofing compliance spending across regulatory mandates. By establishing a strategy to address future risk and compliance initiatives, you can respond to changing business and regulatory conditions while leveraging existing business, functional, and technology components thereby improving the consistency and effectiveness of your data, increasing your business performance, improving your time to production and strengthening your competitive advantage: all while controlling your overall compliance costs.

About Oracle Financial Services Analytical Applications

Oracle Financial Services Regulatory Reporting is part of the Oracle Financial Services Analytical Applications family of solutions for the global financial services industry.

Oracle Financial Services Analytical Applications are built upon a commonly available analytical infrastructure consisting of a unified financial services data model, analytical computations and the industry-leading Oracle Business Intelligence platform.

Oracle Financial Services Analytical Applications include award-winning solutions for Enterprise Risk Management; Governance, Risk, and Compliance (GRC); Enterprise Performance Management (EPM); and Customer Insight for financial services.
