

Clinical One™

Unify your clinical development world

Today, clinical operations rely on a collection of point solutions that sit in silos and weren't built to work together, creating redundancy and inefficiency. What if every element of your clinical trial could be managed through a single, unified platform?

Purpose-built for the Big Picture

In the world of clinical research, speed – while maintaining quality and safety – is the name of the game. But with multiple independent systems, operational efficiency is a problem.

The only way to significantly impact efficiency today is totally re-thinking the way technology supports operations across the entire clinical development lifecycle. With Clinical One,™ Oracle Health Sciences has reimagined the way technology and information are used in clinical research. It provides universal access to information that only has to be entered once and common functions that can be used across all processes. No more silos. No more redundancy. Nothing but real, pure efficiency.

Scalable, Flexible, Simplified

Today, the expectation is that your technology will bend to your needs, not the other way around. When it comes to clinical research, the need is for a solution that can scale up and down, adapt to your needs and be always accessible. This is exactly what Clinical One provides.

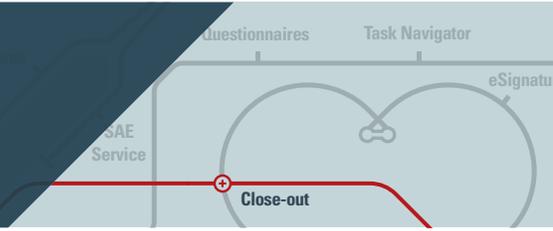

Built on Oracle's award-winning cloud infrastructure, Clinical One offers all the advantages of a true SaaS platform:

- 24x7 availability anywhere, anytime
- No infrastructure, maintenance, or upgrade management
- Configurable for trials of any size, number, and complexity
- Self-service to build/deploy/update studies in real-time
- Embedded modular user training
- Validation preservation

“Technology providers who can offer a unified, cloud-based eClinical platform that enables companies to seamlessly share clinical trial data throughout all phases of the drug development lifecycle and across all functions, will be poised to take advantage of the expanding eClinical market.”

ALAN S. LOUIE, Ph.D.
RESEARCH DIRECTOR
IDC

Oracle Health Sciences breaks down barriers and opens new pathways to unify people and processes, helping to bring new drugs to market faster.

Clinical One Capabilities

Clinical One is the only cloud platform built from the ground-up to support all the core capabilities required for effective study management throughout the entire drug development lifecycle – from design and planning, to start-up and conduct, to close-out and post-marketing. These capabilities include:

- Randomization and Supply
- Data Capture
- Data Management
- Trial Management
- Portfolio Planning
- Risk Management
- Safety Case Management
- Safety Signal Detection

Common and Specialized Functions

Although every capability comes with a set of specialized functions specific to the unique needs of that process, there are also several common functions across the capabilities that can be shared. These functions only have to be developed once. Thereafter, they can be accessed and leveraged with any other Clinical One capability. These common functions include:

- Data Capture
- Study Control
- eSignature
- Site Management
- Signatures
- Document Exchange
- Screening
- Patient Information
- Dictionaries
- Study Design
- Task Navigator
- Edit Checks
- SAE Service
- Inclusion/Exclusion Criteria
- Translation Service
- Subject Management
- Protocol Deviation
- Questionnaires

SCALABLE, FLEXIBLE, SIMPLIFIED

Oracle Health Sciences has reimagined the way technology and information are used in clinical research.

Benefits

The Oracle Health Sciences Clinical One cloud environment changes the way clinical research is done – accelerating all stages of the drug development lifecycle by eliminating redundancies, creating process efficiencies and allowing the sharing of information across functions. The result? A better, faster, more cost-effective way to bring drugs to market to the millions of patients who are waiting with hope.
