Oracle Utilities Information Lifecycle Management for Meter Data

Oracle Utilities Information Lifecycle Management (ILM) for Meter Data delivers powerful and flexible data storage features modern utilities need. With tiered storage and automated processing, Oracle Utilities ILM for Meter Data seamlessly manages massive amounts of data with a total cost of ownership as much as 60% lower than typical high-end disk storage.

ORACLE

UTILITIES

Data Storage for Modern Utilities

The increase in data brought by smart devices has presented utilities with an opportunity and a challenge: Utilities have the opportunity to leverage that data to fuel innovation, but are challenged with the monumental task of managing a sea of data. Oracle Utilities ILM for Meter Data tackles that challenge, leaving utilities with pure opportunity.

Simplify Data Management

Automated storage processes enable seamless data management throughout the entire data lifecycle.

» Leverage embedded algorithms for data management to get up and running quickly

» Easily configure archiving rules to meet organization's needs

» Application business rules manage data interdependencies to ensure only valid data is archived

» Supports sub retention periods, i.e., achieving periods can vary various types of data held within the same object.

» Use automated crawlers to efficiently find data that can be moved to cheaper storage or archived

Reduce Storage Costs

Take advantage of cost-effective data management tools.

» Reduce required disk space with data compression features

» Automatically moves data to less expensive storage options based on activity patterns

» Leverages powerful Oracle database and hardware tools

Improve Performance

Core business processes run at peak performance with streamlined operations.

» Improve performance for mission-critical systems

» Lower query times by keeping only active data on high performance storage

» Increase availability of critical information on the most reliable storage

KEY STATS

· 50-60% lower TCO

· Often less than 12 month ROI

KEY FEATURES

· Automated data selection

· Rich business rules to define data eligible for archiving

· Configurable archiving rules

· Optimized performance with Oracle Technology tools

· Can be used with non-Oracle hardware

KEY BENEFITS

· Streamlines data management

· Reduces storage costs

· Improves process performance

· Dramatically reduces the need for custom development
