 - Profitability ratio
 - Accounts payable
 - Accounts receivable
- Desktop alerts:
 - Changes to write-off settings
 - Changes to credit limits
 - Changes to A/R aging settings
 - Changes to expense management settings
 - Segregation of duties

Today's best source for timely and critical financial management and compliance information is your desktop console. From your digital screen you want to quickly assess performance and get the first level analysis without stepping out of your current applications to aggregate data, run a query or generate a report. If an exception condition occurs, you want to drill into details to understand the root cause or take action by launching another application, sending an e-mail or simply generating an inquiry.

The Issue: Desktop Access to Financial and Compliance Data

Operational dashboards and consoles are the new front door to analytics for rapid and timely access to financial and compliance information across your business. Many businesses want to put analysis capability into the hands of operational users so they can better communicate operational goals at the line of business level and users can immediately identify offending problems across their operation.

Without an operational console to view organizational health, companies can be unaware of a condition that may be impacting that health. As an example, taking advantage of available discounts on open vouchers is a very easy way to improve your cash position. With ready access to metrics through a dashboard application, better decisions can be made regarding the policies around when vouchers are paid.

The Solution: The Financial Management and Compliance Console

With Oracle's JD Edwards EnterpriseOne Financial Management and Compliance Console you close the finance and compliance knowledge-to-execution gap across your business. The Financial and Management Compliance Console provides an intuitive, multi-layered interface that delivers individualized views of information, manages exceptions, determines exception causes, and lets you take appropriate action based on an interactive view of your business through your digital desktop.

Integrating Knowledge to Action Across Your Business

Having desktop knowledge of financial and compliance issues does not necessarily resolve issues. For example, you may see that you are not taking a large percentage of discounts that are available to you. Is the percentage of discounts taken outside of the goals your organization has established? Do you have the cash required to pay? The Financial Management and Compliance Console gives you the tools you need to meet your organizations established goals and to identify such opportunities early.

Figure 1. Summary Data Displayed in the JD Edwards EnterpriseOne Financial Management and Compliance Console

With operational consoles like JD Edwards EnterpriseOne Financial Management and Compliance Console you reduce time to action by displaying dashboards containing threshold values so users understand if a particular business process is within tolerance levels. If not, the user is made aware by glancing at a particular KPI to view the out of tolerance condition, or an automatic alert can be sent to the user notifying them an exception condition exists and they need to take action.

General Accounting – Driving Decisions with Specific Desktop Data

The JD Edwards EnterpriseOne Financial Management and Compliance Console has general accounting metrics to support a series of accounting measurements that span your entire organization. These include:

- Asset and inventory turnover ratio metrics
- Leverage ratios
- Liquidity ratios
- Profitability ratios

- Actual vs. planned for operating income, operating expenses, operating profitability
- Un-posted transactions
- Cash flow
- Revenue trends
- Most Profitable Customer, Brand, or Product

Accounts Receivable – Understand Your Cash Flow

Watching your receivable stream is a way to ensure you can meet your upcoming obligations. With JD Edwards EnterpriseOne Financial Management and Compliance Console you have information on your desktop for:

- Open receivables
- Daily counts and amounts
- Discount information
- Chargeback information
- Delinquency information
- Days sales outstanding

Accounts Payable – Monitor Your Cash Outflow

Watching your outflow is just as critical as monitoring your receivable stream. With JD Edwards EnterpriseOne Financial Management and Compliance Console you have information on your desktop for:

- Open payables
- Daily counts and amounts
- Vouchers paid late
- Discount information

Corporate Governance – Broad Monitoring of Business Operations

Functionality for the JD Edwards EnterpriseOne Financial Management and Compliance Console includes a series of alerts that let you monitor changes to your system. For example, when a customer credit limit is increased, an alert is sent to the credit manager to ensure the increase is appropriate. In addition, changes to the system settings can be a precursor to fraud; alerts can be sent to your appropriate management to closely monitor this activity. This compliance console provides:

- Segregation of duties monitoring
- System change monitoring
- Whistle blower facility
