

JD EDWARDS ENTERPRISEONE HOMEBUILDER MANAGEMENT

ORACLE®

JD EDWARDS ENTERPRISEONE

PRODUCT HIGHLIGHTS

- Manage vendors and subcontractors more effectively
- Streamline and enhance analysis of product data
- Manage profitability at the lot level

The Issue: Managing Costs and Relationships from Contract to Close

To compete for buyers effectively, builders must consistently produce products that meet expectations for quality and features at the desired price. This ability requires flawless coordination and communication throughout the home building cycle.

Prior to construction, all components of the process need to be fully in place. Product offerings, sales information, and purchasing must be in sync before builders even break ground. As construction progresses, site superintendents need visibility into all purchasing and schedule information to orchestrate jobs so that construction is completed on time and within budget.

The Solution: Integrated Homebuilder Management

Oracle's JD Edwards EnterpriseOne Homebuilder Management enables builders to manage like they build. Because home building is not a collection of independent processes that happen in a void, the system has been designed with an emphasis on integration, flexibility, and ease of use.

Start from Square One with a Solid Foundation

In Homebuilder Management, you can establish and manage the products offered to buyers, including communities or subdivisions, phases, lots, plans, elevations, and options. You can tailor the offering at the level of detail that makes the most sense for each component. And, through integration and a familiar interface, you are able to dramatically reduce redundant data entry and enjoy simplified setup and management of the product line. Additionally, you can analyze the performance in various ways—including breakdowns by plan, option, and community—on a pro forma, as well as actual, basis.

Treat Every Prospect as a Potential “Buyer for Life”

Competition for buyers is fierce. You need to be accurate and efficient at every phase of the buying process. Through integration with JD Edwards EnterpriseOne Sales and Service Management, you can better manage relationships—from the prospect's first visit to the sales office through post-close handling of warranty issues. Home owners are better prospects for upgrade and “life-change” marketing campaigns when their initial buying experience is positive.

The information flow begins when a prospect's profile is entered in the sales office. As the cycle progresses, all contract and buyer preferences are entered into the system—once. Construction, purchasing, schedule, and warranty systems are automatically populated with the right information. And, as buyers modify their

selections—whether they are options, cancellations, or transfers—user-defined sales and construction activity rules help control what can be done, and when.

Manage Procurement Effectively in a Changing Environment

Vendor selection, material prices, and subcontractor costs can vary widely with geography and market conditions. Whether you employ bids, takeoffs, or a combination of both, Homebuilder Management enables you to control costs at the lot level and better manage supplier relationships. As you identify lot starts, commitments are automatically generated, based on lot, plan, elevation, swing, and option preferences. You control how far forward to generate these commitments—for prestart activities, all the way through close, or anything in between. As work progresses, you have the ability to review individual transactions, which enables site superintendents and administrative staff to focus on dealing with exceptions rather than tediously vouchering agreed-on costs for which the supplier has already been determined.

See the Whole Picture or Drill Down to Details

The easy-to-use lot workbench provides a bird's-eye view of all activities. From this window into the community, you can access information throughout the integrated system.

You are able to analyze purchasing volumes across multiple communities or drill down to an individual commitment associated with a custom option purchased for a single lot. Information is available at any level of detail and in a view that can be tailored to individual preference.

Benefit from a Comprehensive, Real-World Home Building System

Software is effective only if it can support the realities of your business. Accordingly, many of our home builder clients were actively involved in the design of Homebuilder Management. We found that builders require rich, deep, home builder-specific functionality with the flexibility to mirror their distinctive business processes.

Our clients made it clear that for most home builders, the ultimate goal is for their information systems to help maintain their unique competitive edge. That advantage may be brand, purchasing, or construction efficiencies. That's why Homebuilder Management is tightly linked to other critical applications, such as JD Edwards EnterpriseOne Service Management (Warranty), Project Costing, and Procurement and Subcontract Management. The result is one of the most flexible and complete solutions for reinforcing your unique position in the marketplace.

Feature/Function Highlights

- Automatic commitment generation at lot start
- Actual or pro forma product offering analysis
- Ability to copy products and material items among communities
- Lot status at a glance via workbench

- Support for bids, takeoffs, or a combination of both
- User-defined sales and construction activity rules
- Wildcarding for best-fit product and item selection
- Profitability analysis by community, plan, and option
- Automatic commitment generation based on lot, plan, elevation, swing, and option preferences.

Solution Integration

This module is designed to be integrated with these JD Edwards EnterpriseOne products across your operations using common tools and a Pure Internet Architecture:

- JD Edwards EnterpriseOne Financial Management
 - General Ledger
- JD Edwards EnterpriseOne Supply Management (Procurement)
 - Procurement and Subcontracts Management
- JD Edwards EnterpriseOne Project Management
- JD Edwards EnterpriseOne Order Management
 - Sales Order Management
- JD Edwards EnterpriseOne Customer Relationship Management (CRM)
 - Service Management
