Company Overview

Fishbowl Solutions has more than 10 years of experience designing, implementing, and supporting enterprise content management (ECM) and portal systems to customers throughout North America and EMEA. We focus on helping companies solve their knowledge-sharing problems, and we do this by delivering value-add software components and consulting services optimized for Oracle Enterprise Content Management (ECM) and Oracle WebCenter. Since our inception, we have successfully deployed over 1,000 ECM, portal, and related technology solutions.

Fishbowl Solutions is a Gold-level Oracle PartnerNetwork member and Oracle Enterprise Content Management and Oracle WebCenter specialized partner, as well as a North American Public Sector Pillar Partner for Enterprise 2.0

Integration Overview

Fishbowl's SharePoint Connector version 1.0 for Oracle Enterprise Content Management 11g enables organizations to continue to leverage the collaboration capabilities of Microsoft SharePoint but pairs them with an enterprise-ready ECM system to store and manage collaborative content. The process of adding, editing, and saving content to a new or existing SharePoint site—equipped with Fishbowl's SharePoint Connector—stores the content item in Oracle Enterprise Content Management instead of Microsoft SQL Server or the file system. This provides organizations with a secure and scalable repository for accessing and interacting with SharePoint content. Connector features:

- Update content in SharePoint and store it in Oracle Enterprise Content Management
- Map SharePoint metadata to Oracle Enterprise Content Management metadata
- Configurable per the SharePoint document library
- Select content to be stored in Oracle Enterprise Content Management by library or folder location, or based on file size or extension

With Fishbowl's SharePoint Connector, organizations will realize an integrated Oracle Enterprise Content Management and SharePoint system that delivers full Enterprise 2.0 functionality. Users engage with a familiar experience while organizations maintain control and security of content by having one system of record throughout the enterprise.

Validated Integration

Enterprise Content Management

Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

Integration Details

The connector integration between SharePoint and Oracle Enterprise Content Management operates as a storage provider to store content in Oracle Enterprise Content Management. The integration utilizes Microsoft Web services to enable communication between SharePoint and an organization's Oracle Enterprise Content Management system. SharePoint site administrators create an Admin Web Part containing the configuration settings and then use the Web Part to determine how Oracle Enterprise Content Management document storage will occur. The Web Part is also used to configure user access as well as any metadata mappings.
