Oracle E-Business Suite

Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

### Company Overview

Brainware, Inc., provides Global 2000 corporations and government agencies with fast, intelligent access to critical, unstructured information locked in the growing avalanche of organizational databases, e-mails, document archives, images, and file servers. Brainware's intelligent data capture products—Distiller for Invoices, Remittances, Orders, Mailroom, and EOBs—eliminate costly manual data entry, increasing the speed of document processing from weeks or months to hours or days, obtaining 90-95% field extraction rates right out of the box. Distiller first uses template-free invoice data extraction—without the need for manual review, document sorting, and data entry—after which the data is exported into Oracle Accounts Payable using native integration. Distiller advantages include:

- 80-90% field extractions, routine right from the start
- Unmatched line-item extraction and line-level matching
- Dashboard and reporting that show real-time KPIs for each step in the process
- Scalability to any volume or document type
- Browser-based document verification and correction that is Web-enabled
- Integrated core Oracle Database support

### Integration Overview

Brainware Distiller 5.3 uses template-free invoice data extraction without the need for manual review, document presorting, or data entry. The system imports batches of supplier invoices and related financial documents into Oracle Accounts Payables by using native integration and batch import processing, checking for and ensuring successful job completion. Exceptions and invoices requiring approvals are routed via workflow to the appropriate personnel.

### Integration Details

Brainware Distiller uses advanced learning technology to read and interpret invoices for sorting, data extraction, and processing. Below is an example of the Distiller Template Free Data Extraction and Invoice Processing screen.

Once the suppliers' invoices have been processed through Distiller and the appropriate header and line item detail has been extracted, a native integration between Distiller and Oracle E-Business Suite occurs, allowing for batch processing of invoices to be imported into the Oracle Accounts Payables module for final validation and payment.
