Enhance Oracle's PeopleSoft Performance and Reduce Overall Maintenance and Costs by Managing Data Growth

The Informatica Data Archive 5.3 integration with PeopleSoft 9.1 manages data growth by archiving inactive application data within your production environments.

Company Overview

Informatica is a leading provider of information lifecycle management (ILM) solutions for Oracle, SAP, and custom applications. By providing a comprehensive solution that enables organizations to achieve their ILM objectives, Informatica helps ensure efficient management of both production and nonproduction data. With solutions for data archiving, data provisioning, data security, application retirement, and divestitures, Informatica ILM solutions help businesses improve operational efficiency while meeting compliance requirements and reducing the cost and risk of application data management.

Integration Overview

The integration of Informatica Data Archive 5.3 with Oracle's PeopleSoft 9.1 helps IT organizations manage large volumes of data. The software enables IT teams to easily and safely archive application data within PeopleSoft applications—including master, reference, and transactional data—and then readily access it when needed. With Informatica Data Archive, IT organizations can identify and move inactive data to another online database or to a secure, compressed, immutable file. Application-specific business rules ensure that data integrity is maintained after archiving and that the size of the production instance is reduced, making backup, recovery, and upgrades faster and easier. Informatica Data Archive is ideal for supporting regulatory compliance and data governance programs, as well as for legacy system retirement.

Validated Integration

PeopleSoft Enterprise

Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

- **Gain visibility to application data usage** by analyzing data growth for PeopleSoft modules, tablespaces, and tables.
- **Proactively plan for data growth** by identifying data that can be archived and understanding the impact and ROI of deploying archiving strategies.
- **Improve the operational efficiency** of PeopleSoft applications and reduce upgrade, backup, and recovery times by reducing the size of production application instances.
