

# SOLIX ARCHIVEjinni™ DATA MANAGEMENT FOR ORACLE E-BUSINESS SUITE 11.5.9

Solix Technologies, Inc.  
685 West Maude Avenue  
Sunnyvale, CA 94085  
United States

*Advanced Power for Enterprise Data Management*

*Monitor, Identify, and Archive Data*

## **Company Overview**

Solix Technologies is a leading provider of enterprise data management solutions. Solix has successfully empowered organizations worldwide to achieve Information Lifecycle Management (ILM) goals. Solix is a CMM LEVEL 5 company with an extensive global client base, including Fortune 500 companies. Solix automates enterprise data archiving, application migration, and application upgrade to optimize performance, compliance, and storage. For more information, please visit [www.solix.com](http://www.solix.com).

## **Integration Overview**

SOLIX ARCHIVEjinni seamlessly integrates with Oracle Applications, making use of the standard Oracle-provided data selection and purge routines. ARCHIVEjinni selects, validates, and archives the data before purging. In case of any error or inconsistency, ARCHIVEjinni stops the archiving process and generates an error report.

ARCHIVEjinni features include the following:

- Ensured data referential integrity in the archived instance, so you eliminate the risk of data loss
- Better management of data growth by periodically purging and archiving historical data
- Improved application performance by relocating historical transactions or other inactive data from your production database
- Simultaneous access to both archived and current data facilitated through the ARCHIVEjinni interoperable layer

## **Integration Details**

ARCHIVEjinni Access makes it possible for the user to access the archived data and production data in a single logged-in session. With ARCHIVEjinni, Oracle Application end-users can execute standard reports, query standard forms, and access both archived and live data, without having to log in and out of applications. Users simply need to switch between responsibilities to access both archived and live data in a combined or isolated manner. ARCHIVEjinni does not require enterprises to build separate custom forms and reports to access archived or combined data.

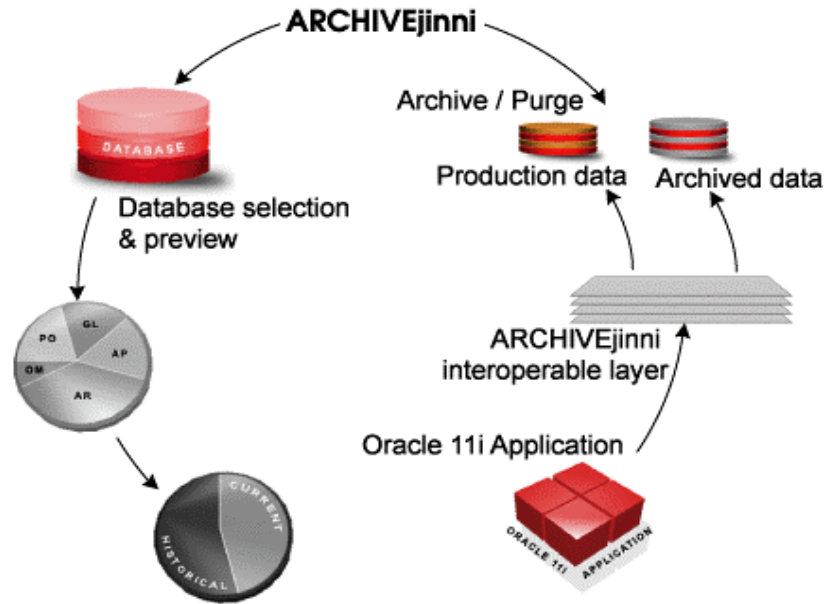

**INTEGRATED WITH**

**E-BUSINESS SUITE**

Through the Oracle PartnerNetwork Applications Integration Initiative, partners with validated integrations are able to provide customers with standards-based vanilla product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

Solix ARCHIVEjinni with Oracle E-Business Suite
