Company Overview

The Wercs, Ltd. has been in business for more than 20 years with software for hazardous communications, specifically for the authoring managing and distributing of MSDSs. Our flagship product, The WERCS[®], is used by many major Fortune 500 companies in North America, including GE, Johnson & Johnson and Halliburton.

Integration Overview

The Wercs has extensive experience interfacing with EnterpriseOne to facilitate the flow of critical data. This data includes product formulation data, inventory data, as well as customer order data. This data flow allows manufacturers to achieve efficiency by streamlining business processes all while ensuring compliance throughout the entire chemical and product lifecycle.

Integration Methodology and Technology

Integration takes place in four ways:

1. WERCS interface reads BOM data, replicates certain elements and explodes each BOM into base chemical (CAS# level) data. WERCS regulatory data is analyzed against the exploded formulation by the customer's regulatory experts.
2. WERCS reads sales order data in the EnterpriseOne database and extracts orders details including the identity of the product sold, the name, address and MSDS delivery preference of the party that placed the order as well as the shipping and the quantity of the product involved. This information is analyzed by WERCS to determine if an MSDS must be distributed.
3. WERCS reads inventory data and locations in the EnterpriseOne database and takes 'point in time' snapshots. This information is analyzed against the exploded formula from step #1 and used to populate required regulatory reports such as SARA and VOC.
4. WERCS reads physical property data from EnterpriseOne and populates data elements within WERCS database.

INTEGRATED WITH

JD EDWARDS ENTERPRISEONE

Through the Oracle PartnerNetwork Applications Integration Initiative, partners with validated integrations are able to provide customers with standards based vanilla product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.
