informatica.com

The Informatica Data Archive 5.3 integration with Oracle E-Business Suite 12.1 manages data by archiving inactive application data within your production environments.

Company Overview

Informatica (formerly Applimation) is a leading provider of information lifecycle management (ILM) solutions for Oracle, SAP, and custom applications. By providing a comprehensive solution that enables organizations to achieve their ILM objectives, Informatica helps ensure efficient management of both production and non-production data. With solutions for data archiving, data provisioning, data security, application retirement, and divestitures, Informatica ILM solutions help businesses improve operational efficiency while meeting compliance requirements and reducing the cost and risk of application data management.

Integration Overview

The integration of Informatica Data Archive 5.3 with Oracle E-Business Suite 12.1 helps IT organizations manage large volumes of data. The software enables IT teams to easily and safely archive application data within Oracle applications—including master, reference, and transactional data—and then readily access it when needed. With Informatica Data Archive, IT organizations can identify and move inactive data to another online database or to a secure, compressed, immutable file. Application-specific business rules ensure that data integrity is maintained after archiving, and that the size of the production instance is reduced, making backup, recovery, and upgrades faster and easier. Informatica Data Archive is ideal for supporting regulatory compliance and data governance programs, as well as for legacy system retirement.

Validated Integration

Oracle E-Business Suite

Through the Oracle PartnerNetwork Application Integration Architecture for Partners Initiative, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

- Gain visibility to application data usage by analyzing current and future data growth for Oracle E-Business Suite modules, tablespaces and projects.
- Proactively plan for data growth by identifying data that can be archived and understanding the impact and ROI of deploying archiving strategies
- Improve the operational efficiency of Oracle E-Business Suite applications and reduce upgrade, backup, and recovery times by minimizing the size of production application instances

Integration Details

Informatica Data Archive integrates with Oracle E-Business Suite to deliver a secure solution for archiving inactive Oracle E-Business Suite application data. This enables

users to improve operational efficiency, maintain application service levels, and minimize IT infrastructure and management costs, while reducing the risk of noncompliance.

In-Depth Data Growth Analysis

- Understand which Oracle E-Business Suite tables and modules occupy the most space
- Identify Oracle E-Business Suite data that can be archived and forecast how archiving strategies impact data growth

Secure Archiving

- Centrally manage archive processes based on application-aware policies for Oracle E-Business Suite
- Proactively archive inactive data to another online instance to manage production instances more effectively
- Simulate archive processes prior to actual execution to validate archiving policies

Access to Archived Data

- Maintain access to archived data from existing Oracle E-Business Suite
