Company Overview

Gate Software Limited's ALL Out Security provides security solutions for Oracle's JD Edwards World and JD Edwards EnterpriseOne applications.

We provide reporting and compliance solutions enabling users of JD Edwards applications to meet their audit requirements in a fraction of the time they would if they were using the standard product.

Gate Software also has a comprehensive portfolio of products for setting up and managing security, enabling clients to create a secure environment either as part of a new implementation or during an upgrade project.

Customers include some of the most demanding JD Edwards clients in North and South America, Europe, the Middle East, Asia, and Australasia.

Integration Overview

ALL Out 3.1 integrates with JD Edwards EnterpriseOne 9.0 by simplifying the way the standard security file is set up and managed.

The solution offers:

- Easy-to-use grid interfaces that update the 10 most important security types in the F00950 security table directly
- Additional multiple-role-management features that resolve potential conflicts in security settings—in a multiple-role environment, if one role has a Yes security setting and another a No, then ALL Out reports on this and provides an option fix
- Grid interfaces that enable security setup automatically during a project such as a new site or upgrade

Integration Details

Security types that are updated include action, column, application, row, processing option, exit, external, tab, and exclusive.

Validated Integration

JD Edwards
EnterpriseOne

Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

Availability

3355 N. Academy Boulevard
Suite 263
Colorado Springs, CO 80917

Tel.: +1.970.460.3025

Fax: +1.303.600.4716

Additional security management features include support of a multiple-role environment, especially conflict/resolution for action code, application and processing-option security and data security merging (row and column security types).

Automatic setup grids enable security to be imported from a spreadsheet, speeding up projects at setup time and during upgrades.
