JD Edwards
EnterpriseOne

Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

Security and Compliance

An easy and effective security and compliance solution for Oracle's JD Edwards EnterpriseOne.

Company Overview

Q Software is a leading provider of security and compliance solutions for Oracle's JD Edwards EnterpriseOne. We have wide expertise in this area and consistently have among the highest customer satisfaction ratings. Q Software is a Gold level Oracle PartnerNetwork (OPN) member specializing in security, risk management, and compliance software for Oracle's JD Edwards and PeopleSoft applications, and Oracle E-Business Suite. Our security and compliance solutions will reduce your risk, reduce your efforts, and reduce your costs.

With our global sales and support ecosystem provided by local offices and accredited partners, we provide service across all continents and in most languages.

Integration Overview

The SEC-Qure E1 Suite 4.0 works with Oracle's JD Edwards EnterpriseOne 9.0 security, enabling you to set up and manage a watertight security environment with integrated Segregation of Duties (SoD) and multiple roles management. Written within the JD Edwards EnterpriseOne development environment, it looks and feels like any other JD Edwards EnterpriseOne application and operates on any platform where JD Edwards EnterpriseOne resides.

The SEC-Qure E1 Suite 4.0 integration:

- Has the same look and feel as JD Edwards EnterpriseOne
- Provides security automation features that allow user or role security and changes to security to be implemented in minutes—not days
- Offers a powerful, flexible, and easy-to-manage SoD policy capability
- Provides powerful and comprehensive security analysis and reporting to simplify your audits

Integration Details

The SEC-Qure E1 Suite integrates with JD Edwards EnterpriseOne, providing the same look and feel as standard JD Edwards EnterpriseOne applications.

E1 Config builds security using preconfigured, reusable components (QComponents) that can be linked together to create job functions, and which are then linked to users or

(customer-only section)

roles. The SoD model is created within the E1 SoD module, so it becomes integrated with JD Edwards EnterpriseOne.

Security automation features in E1Config work with solution explorer task menus to create matching security and can capture security from earlier releases of JD Edwards EnterpriseOne implementations to take forward into the JD Edwards EnterpriseOne 9.0 environment.

The E1Config module can identify hidden and associated programs, applications, and reports (program exits) to ensure nothing is missed when building your security model.

Security is checked for possible sequence manager security conflicts caused by multiple role assignments to users, and security is validated against the SoD model (if one is used) before the security is written to the F0950 file.

The screenshot displays the E1Config Quick950 security setup screen. It is divided into several sections:

- Application Security Defaults:** Contains checkboxes for Run and Install.
- Action Code Security Defaults:** Contains checkboxes for Add, Change, Delete, and Ok>Select.
- Include Associated Objects/Hidden Programs:** Contains checkboxes for Assoc Apps, Assoc UBE's, Assoc Srch/Slct, and Hidden Programs.
- Add Generated Components to a Function and optionally attach the Function to one or more Users or Roles:** Contains radio buttons for Do Not Create Function, Create New Function, and Replace Existing Function.
- Function Name:** A text input field containing the value "GROWER".
