Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

*Control, Visualize, and Automate Application Change*

*Change-management and version-control solution for Oracle's PeopleSoft Enterprise.*

### Company Overview

Quest Software simplifies and reduces the cost of managing IT for more than 100,000 customers worldwide. Our innovations make solving the toughest IT management problems easier, enabling customers to save time and money across physical, virtual, and cloud environments.

### Integration Overview

Quest's Stat for PeopleSoft Version 5.5.5 enables project team members to successfully manage the evolution of their Oracle's PeopleSoft Enterprise 9.1 applications from initial implementation through ongoing enhancements and upgrades. This is accomplished through the PeopleSoft Enterprise exclusive object/file locking, version control, and migration management functionalities. The Stat database becomes the knowledge repository for all enhancement, upgrade, and issue resolution information. Stat enables teams to manage complex projects from one central location, providing an easy way to assemble and track a variety of activities for implementation, enhancement, and upgrade projects. Stat's workflow streamlines and controls all project activities. This is essential when a project encompasses multiple phases, requires a variety of resources, and includes people from multiple groups or business units.

### Integration Details

Stat uses a PeopleSoft Enterprise-delivered command-line interface, so the integration between Stat and PeopleSoft PeopleTools 8.5.1 is nonintrusive and nondestructive:

- Object locking—Stat expedites the development cycle by coordinating development activities for PeopleSoft Enterprise objects and flat files across all databases. During the development lifecycle, users can prevent development conflicts and overwrites by locking PeopleSoft Enterprise objects across all designated PeopleSoft Enterprise databases.
- Version control—PeopleSoft Enterprise objects and flat files can be versioned and indefinitely stored in the Stat repository. At any time, modified objects and files can be easily recovered or rolled back to a prior version. Recovery is possible even if the object or file no longer exist in the PeopleSoft Enterprise environment.
- Migration management—Stat manages the automatic migration of objects and flat

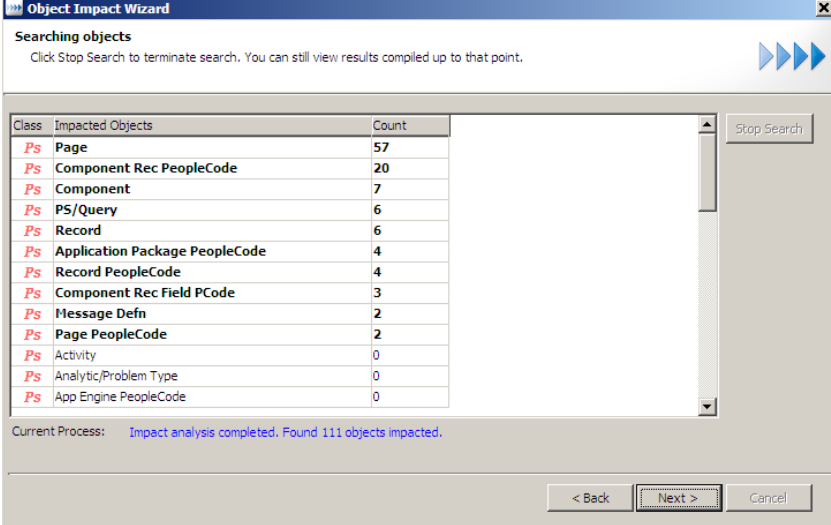

## Availability

The screenshot shows the 'Object Impact Wizard' window with the title 'Searching objects'. Below the title bar, there is a message: 'Click Stop Search to terminate search. You can still view results compiled up to that point.' To the right of this message are four blue arrow icons pointing right. Below the message is a table with three columns: 'Class', 'Impacted Objects', and 'Count'. The table contains the following data:

Class	Impacted Objects	Count
Ps	Page	57
Ps	Component Rec PeopleCode	20
Ps	Component	7
Ps	PS/Query	6
Ps	Record	6
Ps	Application Package PeopleCode	4
Ps	Record PeopleCode	4
Ps	Component Rec Field PCode	3
Ps	Message Defn	2
Ps	Page PeopleCode	2
Ps	Activity	0
Ps	Analytic/Problem Type	0
Ps	App Engine PeopleCode	0

Below the table, there is a status bar that reads: 'Current Process: Impact analysis completed. Found 111 objects impacted.' At the bottom right of the window are three buttons: '< Back', 'Next >', and 'Cancel'.

Stat for PeopleSoft Object Impact Analysis Wizard feature.
