Information Lifecycle Management with Solix EDMS Database Archiving: Manage Data Growth, Archive Inactive Data, and Maintain Access to Data

Company Overview

Solix Technologies, Inc., a leading provider of enterprise data management solutions to help businesses improve application performance, reduce storage costs, and meet compliance and data privacy requirements by achieving information lifecycle management (ILM) goals, data governance strategies, and efficient transition to cloud infrastructure. Solix Enterprise Data Management Suite (Solix EDMS) software enables organizations to implement database archiving, test data management (data subsetting), data masking, and application retirement across all enterprise data. In partnership with leading application and storage vendors, Solix provides integrated ILM, cloud enabling, and data governance solutions for today's heterogeneous environments. Solix has an extensive global client base, including Fortune 500 companies, and an established worldwide channel program of value added resellers (VARs) and systems integrators.

Integration Overview

Solix EDMS 4.5.1 provides a comprehensive solution that addresses the data governance challenges faced by enterprises to better manage and protect the data assets in prepackaged enterprise applications, including Oracle's PeopleSoft Enterprise and custom-developed applications.

Solix EDMS Database Archiving is a key module in Solix EDMS. It provides data classification to identify scarcely accessed data that can be moved to an active archive. It also provides the ability to access this data in the active archive simultaneously from the native application. Should there be a need to update read-only data in the active archive, Solix EDMS Database Archiving provides a dearchiving feature to bring the data back to the production database.

Solix EDMS 4.5.1 integrates with Oracle's PeopleSoft Enterprise 9.1 to relocate historical data from production database to archive database.

Solix EDMS:

- Classifies and tiers structured data to increase operational efficiencies
- Archives to a separate database or other archive stores, allowing you to select the right option for your needs

Validated Integration
PeopleSoft Enterprise

Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

- Maintains access and referential integrity and ensures business transactions are relocated in their entirety
- Retains transparent end user access supported for both merge and archive view
- Supports integrated patch synchronization, integrated space reclamation, and unified control of all features and processes through a single console

Integration Details

Solix EDMS uses the registered knowledgebase including tables, columns, and relations, and joins to group-related transactional business objects into a configuration. Solix EDMS allows building criteria on the configurations and generating of the code.

Modules included for integration are Oracle's PeopleSoft General Ledger, PeopleSoft Payables, and PeopleSoft Purchasing.

Solix EDMS has been built from the ground up using 100-percent Java Platform, Enterprise Edition (Java EE) and service-oriented architecture (SOA) technologies.

The Solix EDMS platform.

Environment

Solix Environment

Solix EDMS Version 4.5.1

Oracle WebLogic Server 11g

Oracle Environment

Oracle's PeopleSoft Enterprise 9.1

Oracle's PeopleSoft General Ledger, PeopleSoft Purchasing, and PeopleSoft Payables

Oracle's PeopleSoft PeopleTools 8.5.1

Oracle Database 11g Release 11.1.0.7.0
