Validated Integration

Enterprise Content Management

Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

Automatic Taxonomy Tagging for Oracle Universal Content Management Content

Documents that were invisible yesterday become visible today through taxonomy-based precision search.

Company Overview

WAND, Inc. is a leading provider of enterprise taxonomies and related software and services to help customers organize and search unstructured or semistructured information. WAND provides customers with taxonomy-based solutions for enterprise search, online yellow pages, e-commerce, product lifecycle management (PLM), targeted advertising, and more.

Integration Overview

WAND's DataFacet 2 integration with Oracle Universal Content Management 11g Release 1 provides the ability to leverage structured business vocabularies as metadata values to organize and retrieve business content.

Features offered by the integration include:

- Foundation taxonomies—prebuilt taxonomies cover more than 500 knowledge domains with customization services available
- Taxonomy manager—drag-and-drop simplicity for arranging taxonomy terms and to test tagging rules
- Taxonomy annotator—automatically tags documents with taxonomy metadata as they are added to Oracle Universal Content Management
- Taxonomy navigation controls—advanced faceted navigation allows taxonomy-based browsing and filtering of search results

Integration Details

DataFacet is shipped as three major components:

DataFacet Taxonomy Server is a Java 2 Platform, Enterprise Edition (J2EE) Web application that provides user interface and classification support. It requires any J2EE container, such as Oracle WebLogic Server, and is shipped as a standard WAR file.

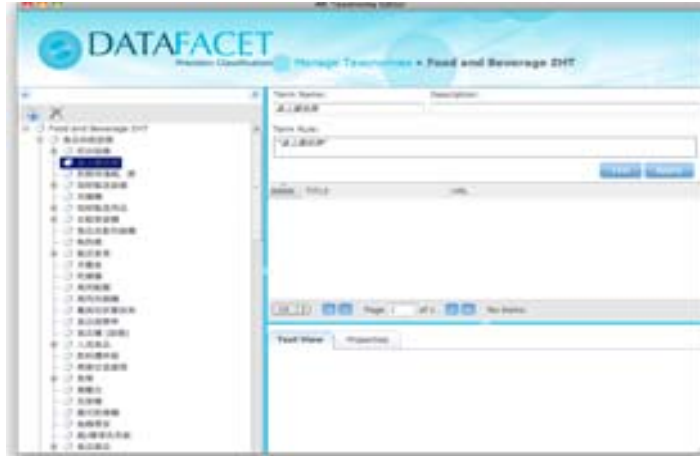

DataFacet Taxonomy Manager is a JavaScript/Ajax application that runs under an Adobe Air wrapper. It is for managing and testing the taxonomies against sample documents. It ships as an .air file, and requires the Adobe Air runtime for the test platform.

DataFacet Taxonomy Manager

Content Categorizer Plug-in is an Oracle Universal Content Management component that is deployed inside the context of the Content Categorizer module. It uses the standard integration points of Content Categorizer to provide auto-classification of documents as they are checked into Oracle Universal Content Management. It is shipped as an .hda component archive.

Taxonomy metadata is automatically applied to content in Oracle Universal Content Management at the time it is checked in.
