Oracle Crystal Ball New Features
Release 11.1.2.1.000

**KEY FEATURES**

Oracle Crystal Ball is the leading spreadsheet-based software suite for predictive modeling, forecasting, simulation, and optimization. Used by 85 percent of the Fortune 500 and taught in the top 50 U.S. MBA programs, Oracle Crystal Ball gives you unparalleled insight into the critical factors affecting risk, and calculates the likelihood you will reach your objectives. With Oracle Crystal Ball, you can make the right tactical decisions to move you toward your strategic goals and gain a competitive edge under even the most uncertain market conditions.

**FEATURES**

- Support for Microsoft Excel 2010
- 64-bit Crystal Ball for Compatibility with 64-bit Microsoft Excel 2010
- New ARIMA Added to Predictor
- Event Forecasting Added to Predictor
- Crystal Ball EPM for Enterprise Planning Suite
- More Powerful Crystal Ball API

**Support for Microsoft Excel 2010**

Crystal Ball release 11.1.2.1.000 now supports Microsoft Excel 2010.

**64-bit Crystal Ball for Compatibility with 64-bit Microsoft Excel 2010**

A 64-bit version of Crystal Ball is now available for use with the 64-bit version of Microsoft Excel 2010.

**ARIMA Added to Predictor**

The Predictor feature of Crystal Ball now includes ARIMA (autoregressive integrated moving average), an advanced modeling technique for time-series analysis. Time-series forecasting with classic models like moving average and exponential smoothing becomes difficult when a series exhibits complex trends. ARIMA is a flexible model that can be used for fitting and forecasting many of these series. With the addition of ARIMA, Crystal Ball increases the forecasting power of Predictor to better meet the needs of enterprises that depend on high-quality forecasts.

**Event Forecasting Added to Predictor**

Predictor time-series forecasting now enables you to capture special events in the data and leverage your knowledge of similar future events to improve forecasts. These events can be one-time occurrences, such as a major marketing program, or events that repeat on a regular basis, such as quarterly sales promotions. You can also capture events that repeat at irregular intervals, such as assembly-line lockouts.

**Crystal Ball Enterprise Performance Management for Enterprise Planning Suite**

**More Powerful Crystal Ball API**

You can now add risk analysis, forecasting, and simulation to your corporate applications and extend
your enterprise modeling capabilities beyond Microsoft Excel by using the Crystal Ball Application Programming Interface for Microsoft .NET Framework (the Crystal Ball API). The Crystal Ball API has been updated and expanded to include the latest Crystal Ball features and is packaged to be built directly into your Web and Microsoft Windows-based applications.

**New Features, Crystal Ball Release 11.1.2.0.00**

*This section describes features released in Crystal Ball 11.1.2.0.00.*

**Predictor Integration with Planning and Essbase**

With Crystal Ball EPM release 11.1.2.0.00, you can now use the powerful time-series forecasting capabilities of Predictor on historical data from Planning and Essbase. Predictor works within Crystal Ball EPM and Oracle Hyperion Smart View for Office, Fusion Edition to create forecasts and paste them directly into a Planning form or ad hoc queries in Planning or Essbase. Forecasts are then submitted back to the Planning or Essbase server to help create more accurate budgets and rolling forecasts.

**Define Assumptions from Forecasts**

You can now define an assumption using the data from a forecast. Crystal Ball automatically fits an assumption to the forecast data and selects the best fit, or you can create a custom distribution assumption using the raw data. This feature enables you to quickly use forecasts from Crystal Ball simulations as inputs to a model.

**Updated Scenario Analysis Tool**

The Scenario Analysis tool was updated with a new wizard interface similar to the ones used for other Crystal Ball tools. Scenario Analysis is a powerful analysis tool that runs a simulation and then sorts and matches all the resulting values of a target forecast with their corresponding assumption values. This tool enables you to investigate which combination of assumption values gives a particular result.

**Localized for Spanish and Japanese**

The user interface for Crystal Ball release 11.1.2.0.00 was localized into Spanish and Japanese. An installer menu enables you choose the language to use for the installation as well as the Crystal Ball user interface.

**Addresses U.S. Section 508 Accessibility**

Crystal Ball release 11.1.2.0.00 was designed to address the U.S. Federal government’s accessibility standards for Section 508 enabling individuals who rely on assistive technologies such as screen readers and screen magnifiers to more effectively use the software. Keyboard equivalents for menu commands and dialog controls are available at all times. An additional Accessibility mode activates other features described in Appendix B of the Oracle Crystal Ball User’s Guide.

The accessibility status of Crystal Ball was documented using the Voluntary Product Accessibility Template (VPAT). The VPAT can be used by U.S Federal contracting and procurement officials to evaluate a product with respect to the provisions contained in Section 508.

**Designed for U.S. FDCC Mandate**

Crystal Ball release 11.1.2.0.00 was designed to meet the U.S. Federal Desktop Core Configuration
(FDCC) mandate. FDCC specifies mandatory configuration requirements for the Microsoft Windows XP Pro and Windows Vista operating systems when used on U.S. Government desktop systems.

Support for New Windows Version

Crystal Ball is now supported on Microsoft Windows 7.
