IBM DB2 CONTENT MANAGER FOR JD EDWARDS ENTERPRISEONE

High Scalability, Reliability, Flexibility and Security.

Industry-Leading Content Management Product Portfolio.

Company Overview
At IBM, we define an on demand business as one whose business processes – integrated end-to-end across the company and with key partners, suppliers, and customers – can respond with speed to any customer demand, market opportunity, or external threat. In on demand business, organizations must be able to utilize their resources flexibly and variably, responding to the ebb and flow of market demands.

Integration Overview
The integration of IBM DB2 Content Manager and JD Edwards EnterpriseOne enables JD Edwards users to dynamically access unstructured content stored in the DB2 Content Manager system, such as digitized invoices, employee photos, videos, and email. Key benefits include:

- Increased productivity
- Paperless business process
- Dynamically access unstructured content. Search criteria is built on the fly based on the current data residing on JD Edwards application window
- Rapid and simple customization. JD Edwards customers decide where to add integration points and how to implement the integration
- Minimal user training. The integration is transparent to JD Edwards users
- HTTP protocol/web client. No additional installation task on client machine
- Flexible configuration. Multiple operating systems, database vendors and content repositories are supported
- High scalability and stability inherited from DB2 Content Manager

The IBM DB2 Content Manager product portfolio helps manage, share, integrate and deliver critical business information on demand. IBM content management software and solutions support challenging information types -- images, documents, reports, e-mail, web content, e-records, multimedia, computer report output and more. The integrated, comprehensive content management portfolio assists organizations that must improve productivity, enhance responsiveness, and meet the demands of regulatory compliance.
With DB2 Content Manager and JD Edwards integration, JD Edwards users access unstructured content through the federated layer of IBM WebSphere Information Integrator for Content. The unstructured content could be stored and managed in multiple content repositories.

**Integration of IBM DB2 Content Manager and JD Edwards EnterpriseOne**

Dynamically access unstructured content such as digitized invoices. Search criteria is built on the fly based on the current data residing on JD Edwards application window.
