

Oracle Fusion Financials *The New Standard for Finance*

Oracle Fusion Financials is a modular suite of financial applications designed to work as a complete financial solution or as modular extensions to your existing financial applications portfolio.

Revolutionary Information Access

“One of the best parts of reporting is the way that data is summarized with tree-like capability, allowing you to see data at any level of detail and actually seeing the balances. This goes way beyond some of the things I’ve seen in other software.”

—Pam Bateman,
Emerson

Intelligent Decision-Making

“The value I see from the General Accounting Manager Dashboard is the fact that I don’t have to go all over the place. I don’t have to go and extract my data and get somebody else involved. I don’t have to log into another system. I can do everything from where I am.”

—Debra Lilley,
Fujitsu

Part of Oracle Fusion Applications, Oracle Fusion Financials is a 100 percent open, standards-based set of integrated financials modules that is much more than just another financial application. Unlike traditional financial systems that consider decision support and intelligence as an afterthought, Oracle Fusion Financials delivers unprecedented business insight to all users. Its revolutionary reporting platform and native business intelligence set the new standard for finance and fundamentally change the way finance professionals work.

The New Standard for Reporting

There are different reporting needs within the finance organization. The CFO needs professional-quality financial statements, financial analysts need to analyze ledger balances, and other users need to perform ad hoc transactional queries. A common complaint from all these professionals is that the data is dispersed across multiple sources and is outdated, inaccurate, and time consuming to gather.

Oracle Fusion Financials delivers a state-of-the-art reporting platform that is natively built on top of an analytic data model. Single-step posting from transactions to the analytic data model ensures consistent, timely, and accurate information for both management and external reporting. All the reports work off the same datasource and support drill-downs to live source transactions. All queries and reports are accurate up to the minute, providing multidimensional analysis without the need for a separate data warehouse.

Accessing information is different in Oracle Fusion Financials. Users no longer need to depend on IT involvement to create reports or queries. Finance users can gain access to live financial reports and report snapshots through a secure, self-service reporting center. Other users can easily create their own ad hoc transactional queries using predefined business views that use common business language specifically designed for nontechnical users to understand.

Result: Live access to information how and when users need it.

The New Standard for Decisions

Finance users, especially those doing heads-down data entry, often have limited information to complete transactions. Studies show that users can waste up to 25 percent of their day searching for data, and companies can spend the equivalent of 10 percent of salary expenses on employees performing ineffective searches.

Unparalleled User Experience

"What Oracle has done in Oracle Fusion Applications is have the vision to bring the technology all together. And it's all about that user experience. You can do your job so much quicker and more efficiently and with less opportunity for error because the system works the way that you do. I think that's the innovation. It sounds very simple, but that's what it is."

—Debra Lilley,
Fujitsu

Additional Business Value for Your Existing Applications

Oracle Fusion Financials is designed to work side by side with other Oracle Fusion Applications. Oracle Fusion Accounting Hub provides an opportunity to leverage the information access capabilities of Oracle Fusion Financials while keeping your existing portfolio in place. Oracle Fusion Accounting Hub allows you to aggregate data from any multiple-general-ledger environment—whether Oracle or non-Oracle.

Oracle Fusion Financials reduces time wasted on ineffective searches by arming users with the precise information they need at the right time. Configurable, role-based dashboards consolidate information from a variety of sources, proactively monitor processes, and push exceptions to various finance roles so they can take immediate action. Users know exactly what they need to do just by logging in. With Oracle Fusion Financials, the system does more of the thinking for you by providing real-time intelligence within the context of a business transaction to guide your decisions.

Result: Better decision-making by all users.

The New Standard for Productivity

Finance organizations are constantly trying to find ways to be more productive and to do more with less. Unfortunately, transaction processing still dominates much of finance's workload. Oracle Fusion Financials dramatically lowers the costs of resource-intensive tasks. Native spreadsheet technology provides a natural extension to transactional entry to support high-volume data entry across most finance functions. Innovative out-of-the-box imaging integration dramatically improves invoice processing and eliminates the need for costly third-party solutions. In addition, Oracle Fusion Financials is designed to work the way finance users work on a daily basis. All pages are configurable and optimized for the most productive user experience.

Result: Less time spent on menial tasks and more time on value-added activities.

Oracle Fusion Financials: Protect and Extend Your Existing Applications

Oracle Fusion Financials is designed to work with other Oracle Fusion Applications and your existing applications portfolio, such as Oracle E-Business Suite and Oracle's PeopleSoft applications, to evolve your business to a new standard of performance. An example of this design philosophy is Oracle Fusion Accounting Hub, which allows you to marry the innovations in Oracle Fusion Financials with your existing investments with minimal implementation effort and disruption to your financial processes. Oracle Fusion Accounting Hub integrates with third-party feeder systems from diverse industry applications.

Oracle Fusion Accounting Hub allows you to simultaneously meet diverse corporate, management, and reporting requirements, such as U.S. GAAP, IFRS, and local statutory requirements. Oracle Fusion Accounting Hub contains many of the innovations in Oracle Fusion Financials, such as role-based dashboards, state-of-the-art reporting and analytics, spreadsheet integration, a robust allocation engine, and the invaluable capabilities of Oracle Fusion Middleware.

Oracle Fusion Applications

Oracle Fusion Financials is part of Oracle Fusion Applications, which are completely open, standards-based enterprise applications that can be easily integrated into a service-oriented architecture. Designed as a complete suite of modular applications, Oracle Fusion Applications help you improve performance, lower IT costs, and get better results. Whether you choose one module, a product family, or the entire suite, Oracle enables you to gain the benefits of Oracle Fusion Applications at a pace that matches your business needs.
