

Now, Where Is My Data?

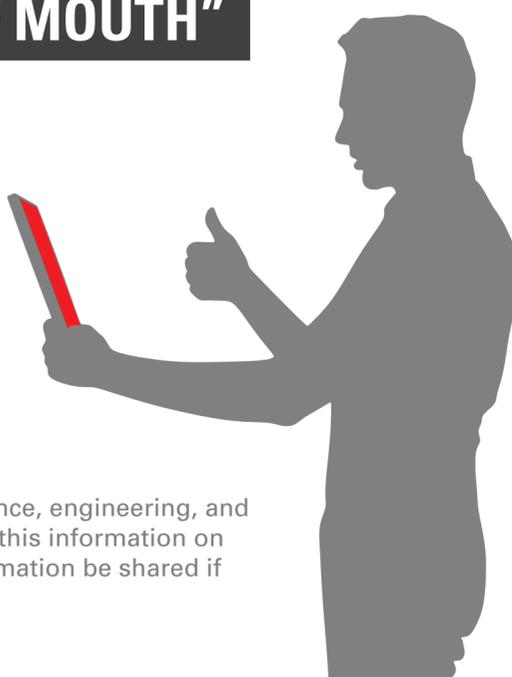

The challenge in ensuring that all project information is shared with suppliers, contractors, and project management teams is a reality felt by many. The risks associated with this are great. Now is the time for a solution that can provide complete project insight.

THE PAPER TRAIL

In the digital world, valuable information can be hidden away until someone needs it. Consider this challenge when working on large-scale capital asset projects and the difficulties increase tenfold.

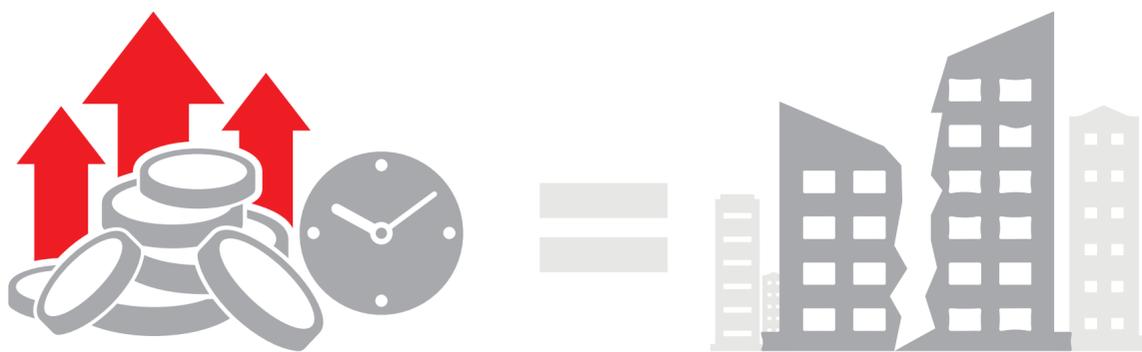

THE ISSUE WITH "WORD OF MOUTH"

Information is needed by all parties in large maintenance, engineering, and construction projects. But where is it? Does Bob have this information on his notepad? But where is Bob and how will this information be shared if there isn't one source?

THE JENGA EFFECT

Data kept in a silo also suffers from "the Jenga effect." One person keeping project data to themselves runs the risk of the entire project tumbling down. Poorly built and maintained infrastructures, project delays, and costly overruns are all a guaranteed result.

PROFIT, PLANNING, PROCESS

There are tools to help provide a more efficient and unified approach to large-scale capital asset projects. Data sharing is key to ensure that Bob's situation is avoided.

PROCESS MANAGEMENT IS KEY

In a time when data sharing is key to the success of a project, situations like Bob's need to be avoided at all costs. Pressure is on for large-scale projects to be delivered on time, within budget, and without project overrun.

Oracle's Primavera P6 Enterprise Project Portfolio Management is the solution that can provide comprehensive project insight, project management, and a unified approach to large-scale projects to ensure that data sharing is never an issue.
