

Oracle Global Trade Management Cloud

Streamline Global Trade Networks with a Modern Supply Chain Solution for Customs, Logistics, and Cross-Border Compliance

Synchronizing today's global supply chains requires comprehensive logistics—something that's difficult to achieve with yesterday's IT systems. Another challenge is providing stakeholders with the compliance visibility and control they need throughout the shipment process. The good news: Oracle's cloud-based solution makes it easy, fast, and affordable to modernize your trade management capabilities, mitigate risk, and optimize your landed costs.

A Complete and Integrated Solution for Global Trade

Orders and shipments, customs and regulations, trade agreements—these activities are the bedrock of international commerce. Oracle Supply Chain Management (SCM) Cloud—enriched by integrated global trade management solutions—can optimize the movement of goods, with lower costs and greater accuracy, across all transportation modes in any country.

Using an integrated logistics framework, Oracle Global Trade Management Cloud gives you complete visibility and control over orders and shipments so you can extend cutting-edge trade practices throughout your organization. It streamlines cross-border trade practices by allowing stakeholders to exchange trade data and share milestones as they monitor the physical flow of goods. Oracle Global Trade Management Cloud helps you connect all your customs and compliance processes into the physical flow of goods as you establish a global network of shipping partners. This unique cloud solution begins by classifying goods for all the countries in which you do business. It walks you through the process of

- » Screening your master data, sales or purchase orders, internal moves, shipments, and any other transaction type for denied parties, embargoes, or sanctions
- » Verifying necessary licenses and other regulatory requirements, including inspections, customs, and corporate trade controls for your shipments
- » Producing the commercial shipment documents and electronic filings you need to clear Customs and collaborate with trading partners

As you accumulate transactions over time, built-in analytics enable you to see trends and spot problems so you can continually measure and improve performance.

Compliance officers appreciate the solution's robust trade compliance functionality, which makes it easy to manage licensing, exceptions, and other government requirements. Authorized users can classify goods for each pertinent country. With a few clicks, they can preview tariff duties and tax rates and prescreen all parties for unforeseen sanctions and embargoes.

CHECKLIST: HOW HEALTHY IS YOUR GLOBAL TRADE MANAGEMENT SYSTEM?

- Does your organization suffer from a lack of cross-functional trade visibility and internal trade controls?
- Is it difficult to make informed decisions related to trade?
- Do manual processes result in costly delays or expose your organization to unnecessary risk?
- Do you have a single cohesive system to manage all your customs and trade compliance needs?
- Do you have embedded analytics to guide and troubleshoot your daily trade operations?
- Are you sure your international shipments are compliant, and not exposing your company to unnecessary risk?

ORACLE

The Oracle solution also streamlines **government customs processes** so goods are not held up in transit by unexpected entry procedures. The system helps you identify, capture, and value the shipment data required for entry into each international market.

An embedded **document management** system allows you to produce, revise, and track the documents you need to clear customs. Having all this functionality in the cloud makes it easy to share documents and exchange data with freight forwarders, customers, and brokers. Embedded analytics allow you to see all your trade information from any device.

Why Cloud?

Global trade is an ideal domain to move to the cloud due to the constant need to share current information from a centralized source. Companies with advanced trade operations must continually refresh data and classify product codes, then distribute that information to partners. Oracle handles these updates and maintains current information in the cloud, so it is accessible to all authorized parties. That means each trading partner doesn't have to upload product classification documents, commerce documents, and other information.

For example, if you are working with a specific country, you might license the use of a product for only that country. However, as soon as you have completed that negotiation, you may acquire some new business or subsidiary, which presents a completely new set of countries for which you need classification codes, product codes, and restrictive product screening lists. There is a whole host of content and communication associated with these activities. The cloud enables tremendous flexibility and ubiquitous reach.

- » Centrally manage global trade operations
- » Optimize, automate, and monitor cross-border transactions
- » Enjoy greater visibility into orders and shipments

Maximize Value, Minimize Risk

Oracle's cloud-based global trade management solution can be configured to meet your unique needs, allowing you to achieve maximum value with minimal risk. This solution spans a broad spectrum of customs and compliance processes, for all modes and geographies. As a proven system built for the cloud, Oracle Global Trade Management Cloud is quick to deploy and simple to use. Most customers are live and transacting business in a matter of weeks.

Oracle Global Trade Management Cloud is designed for rapid deployment with minimal investment, so you can run your business more efficiently. Subscription-based payment terms eliminate the need for a significant up-front capital investment. And because Oracle takes care of the software installation, monitoring, patching and upgrading, you'll free your IT resources to focus on value-added tasks.

For more information, contact Oracle or visit oracle.com/scm.

"We knew we wanted to be cloud-based because it has the advantages of no up-front investment and rapid deployment. And we also wanted to take a fresh look at our business processes. With so much going on at once, we needed a global trade management solution with minimal risk that could integrate out-of-the-box with Oracle E-Business Suite."

GLOBAL BEST PRACTICES

- **Screening:** Reduce risk by properly screening transactions against government lists for both imports and exports.
- **Compliance:** Manage the legal, regulatory, and corporate complexities of cross-border transactions.
- **Customs:** Simplify global customs filings and communicate accurately with authorities and trading partners on cross-border transactions.
- **Intelligence:** Monitor key performance indicators and bridge the gap from analysis to action.
- **Fiscal Control:** Gain financial visibility into your extended supply chain, including transportation costs and related fees, insurance, duties, and taxes.
