ORACLE APPLICATIONS
RAPID START SERVICE

Oracle Applications Rapid Start Service, is delivered by Oracle Consulting, provide a pre-configured and tested environment with core functionality setup for your Oracle applications that will provide you with the exceptional implementation experience that you expect from Oracle.

Oracle Consulting Enables your Success
Oracle's applications are designed to address the most complex business requirements. They provide comprehensive business and industry solutions based on leading practices, enabling organizations to increase productivity, accelerate business performance, and provide a lower cost of ownership. Oracle Consulting helps you take advantage of these capabilities quickly and cost effectively with Oracle Applications Rapid Start Service. Our Oracle application experts will guide your team through the critical steps necessary to modify the base configuration of your Oracle Applications and prepare your users for these innovative new applications. The services provide you with the guidance, thought leadership, and leading practices you need to drive business success.

Oracle Applications – Expert Configuration and Implementation
Your implementation begins with discovery and configuration tools created by Oracle Consulting in partnership with Oracle Product Development. We use these tools in conjunction with a proven, systematic approach to efficiently guide you through the implementation process. During the engagement, we perform the following key steps:

• Facilitate discovery interviews and configuration workshops
• Update the base configuration of the application based on your requirements and business rules
• Load pre-configured and customer-specific data
• Prepare you and your organization for a pilot or production deployment

Oracle Applications Rapid Start Service has five main stages: Inception, Elaboration, Construction, Transition, and Deployment. During each stage, we guide you through the detailed process so that you clearly understand the activities being performed, what actions come next, and how we effectively partner together for success.

During the inception stage, we educate your staff on the entire implementation process and outline key roles across our combined project team. We validate your project goals and conduct preliminary interviews to aid in the initial setup process. After the initial setup of the product, we load your preliminary data and pre-configure certain parts of the product based upon best practices for customers in industries similar to you.

In the elaboration stage, we start by facilitating sessions to review out-of-the-box capabilities (using pre-configured environment) and the best practice processes they support. This action ensures that your project staff has a complete view of our starting point, and is well prepared
WHY ORACLE CONSULTING

• Leading Expertise: Oracle's own experts providing thought leadership for every Oracle solution.

• Broad Coverage: "End-to-end" lifecycle services across the entire Oracle product footprint.

• Global Scale: 13,000 Oracle experts in 145 countries, serving over 20 million users.

• Unified Methodology: Based on industry standards, high quality results across complex projects.

• Flexible Delivery: Onsite, offsite, and offshore, along with innovative solutions such as Expert Services and Architecture Services.

• Strategic Roadmap and Advisory Services

to make decisions on whether modifications are appropriate and required. We follow these sessions with deep dive workshops to gather specific input on desired changes to the solution. Afterwards, we partner closely together with you to determine the enhancements that are best suited for your initial deployment and which of those modifications would be better reserved for subsequent project releases.

In the construction stage, we use the information previously gathered to further configure the solution in close partnership with your team. This approach provides you with the best visibility possible into the changes being made. Once the changes are made, we test and review them together to validate that project goals are being met.

In the transition and deployment stage, your users will test the environment to evaluate the overall fit for your business. In addition, we will deploy the configured and tested application to the location of your choice: The Oracle Cloud (Oracle Cloud Services), a partner Cloud, or your own infrastructure (On Premise).

Adopting Oracle’s Best Practices Reduces Cost and Complexity

Oracle Applications Rapid Start Service emphasizes an "out-of-the-box" philosophy and adoption of the best practices inherent in the product. This approach is ideal for customers that prefer an approach that emphasizes rapid time-to-value. For customers desiring higher levels of customization, this service is an excellent way to establish a baseline instance for the start of a tailored implementation project.

How We Are Different

The Oracle Consulting team is focused exclusively on Oracle Technologies, and we have the experts that others turn to for leading practices in Oracle hardware and software implementations. We know how to best optimize your investment in Oracle products and can provide your business with tightly integrated, comprehensive, superior services throughout your ownership experience.

Getting Started

Leverage Oracle’s methods, tools, and extensive experience with customer implementations across diverse industries and geographies. Tight integration across Consulting, Development, Support, Education, and Global Delivery puts the entire Oracle team behind your success.
