

Digitize Requirements Management with Oracle PLM Cloud

If left unchecked, poor requirements definition and management undermines competitiveness, wastes time, budget and resources while failing to deliver planned functionality.

What is your path to take control of the requirements definition, management, and change processes?

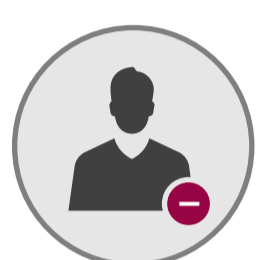

BUSINESS IS CHANGING

72%
of companies use disconnected tools like spreadsheets and documents to manage requirements
Source: Forrester 2014

46%
of projects miss business objectives due to low requirements maturity
Source: IAG Consulting

51%
of organizations do NOT have the necessary requirements resources
Source: PMI 2014

It's time to imagine how a modern, integrated requirements solution can augment your PLM processes to achieve overall project success.

ORACLE REQUIREMENTS MANAGEMENT

With Oracle PLM Cloud you will mature your requirement management processes by standardizing requirement definition templates, analyzing scope across all requirements, verifying requirements achievability and validating all requirements have been met.

Define Requirements

Define and clarify requirements so they are understood by all stakeholders through leveraging modern social discussion capabilities.

Maintain Traceability

Create linkages across ideas, concepts, project, and the product record. Define dependencies and capture clarifying decisions.

Determine Product Scope

Obtain an immediate and complete view of the total scope of requirements from prioritization to verification and validation.

Optimize Requirements

Analyze scope, fulfillments status, and change impact across the entire requirements specification.

WHAT MAKES ORACLE DIFFERENT?

Clearly define, easily manage, and quickly trace requirements through the entire product lifecycle with Oracle PLM Cloud.

Internal and external collaboration with embedded modern technology: social, mobile, cloud

Trace, verify and validate requirements to downstream artifacts in Oracle PLM cloud or on-premise solutions

Cross discipline requirements development, management, visibility, and analysis

Uniquely integrated requirements management processes

BENEFITS

Accelerate time-to-market

Increase efficiency and productivity

Increase customer satisfaction

Improve success rates
