

The Future of the Cloud

Today's breakthrough business and IT technologies originate in the cloud. Tomorrow's advancements will go further and faster. If you don't start today, you might get left in the dust.

By 2020...

1

Over 50 percent of all enterprise data will be managed autonomously.

2

Over 80 percent of application and infrastructure operations will be resolved autonomously.

3

Security will become the top priority for businesses.

4

Cloud providers will add on-premises controls—or miss out on mission-critical workloads.

5

Regulated industries will rapidly migrate to the cloud.

6

Most new applications will be built with microservices architectures.

7

AI will cement its place in the enterprise.

8

Customer support interactions will be conducted by chatbots.

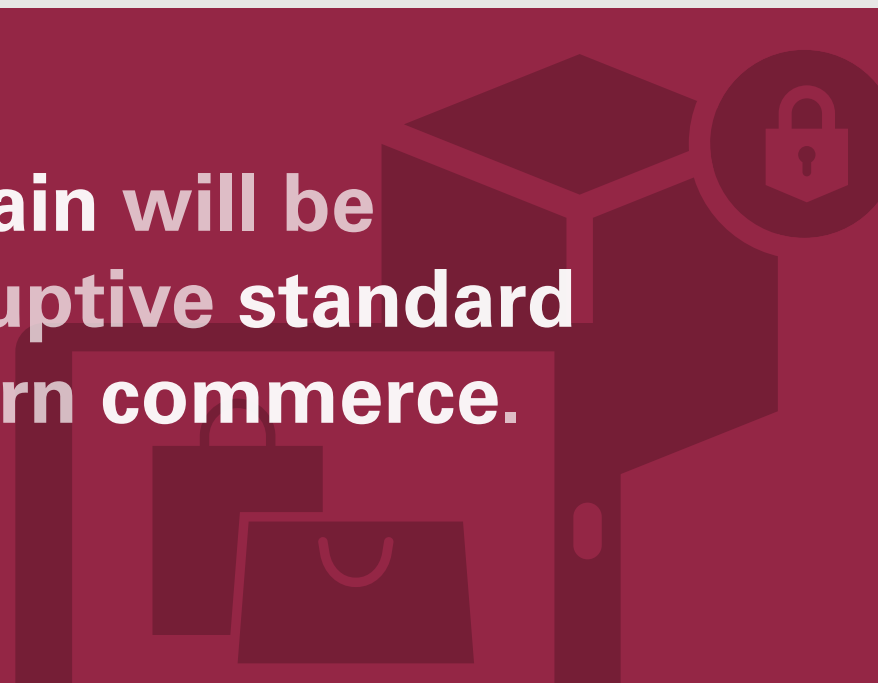

9

IoT will evolve from individual components to an integrated platform.

10

Blockchain will be the disruptive standard in modern commerce.
