Oracle Managed Platform as a Service

Oracle Public Cloud Machine (also known as the Oracle Cloud Machine or OCM) and Exadata Cloud Machine (ECM) deliver Oracle Public Cloud (also known as Oracle Cloud) on premise. Rather than procuring hardware, installing software, and managing the system, you can easily consume cloud services on your premises for a monthly fee, just like you do with the Oracle Public Cloud. Oracle provides the hardware, installs the Oracle Cloud software, and manages the day-to-day operation of the OCM or ECM. Oracle Cloud Machine allows you to bring your own applications and workload by providing the same enterprise-grade IaaS platform as Oracle Cloud. You can use Oracle Cloud PaaS services as building blocks to accelerate the development of your innovative applications while maintaining complete control of your data and system.

Oracle Managed Cloud Services provides tenant and lifecycle management along with governance services for enterprise class production workloads with Oracle databases, Oracle middleware, and Oracle applications deployed on either the Oracle Public Cloud or Oracle Cloud Machine or both.

Managed Platform as a Service for Oracle Technology Cloud

Pre-Packed, Single Price Managed Platform as a Service:
Managed Database Cloud Service and Managed Java Cloud Services have one level of service and are priced using the Oracle Cloud OCPU metric. Service availability targets default to the specifications listed for Oracle Cloud or OCM PaaS and IaaS. Managed Cloud Services offer service level agreements credits for service response time. The key features and deliverables are listed below:

Tenant Guest VM Administration: The services include creation, monitoring, backup, restore, and management of guest virtual machines.

User Administration: These services include user creation, deletion and role management.

Database and Web Logic Server Lifecycle Management: These services include provisioning, schema administration, refreshes, monitoring, configuration, incident, problem, availability and change management.

Governance Services: These services include a Service Delivery Manager as a single point of contact for all services, proactive business and operational planning advice, quarterly reviews, standard reporting and optimization guidance.
KEY FEATURES

- Pre-Packaged, Single Price Managed Database Cloud Services and Managed Java Cloud Services
- Tenant Management Services
- Lifecycle Management Services
- Governance Services
- Custom Managed Platform Services
  - Security Services
  - Disaster Recovery Services
  - High Availability Services
  - Integration Services
