

HYPERION

ORACLE HYPERION FINANCIAL CLOSE MANAGEMENT

ORACLE'S FINANCIAL CLOSE MANAGEMENT SOLUTION IS THE FIRST OF ITS KIND – A FINANCIAL CLOSE MANAGEMENT SOLUTION THAT SPANS THE EXTENDED FINANCIAL CLOSE CYCLE

KEY FEATURES

- Web-Based Task Scheduling
- Pre-built dashboards
- Active Calendars
- Task automation
- Account Reconciliations

KEY BENEFITS

- Process consistency
- Improved control
- Easy to identify bottlenecks
- Supports compliance framework

Oracle Hyperion Financial Close Management is built for centralized, web-based management of period-end close activities across the extended financial close cycle. The first application of its kind, Oracle Hyperion Financial Close Management will help manage all financial close cycle tasks including ledger and sub-ledger close, data loading and mapping, financial consolidation, account reconciliation, tax/treasury and internal and external reporting processes – any task associated with the extended financial close.

Get Control of the Extended Financial Close

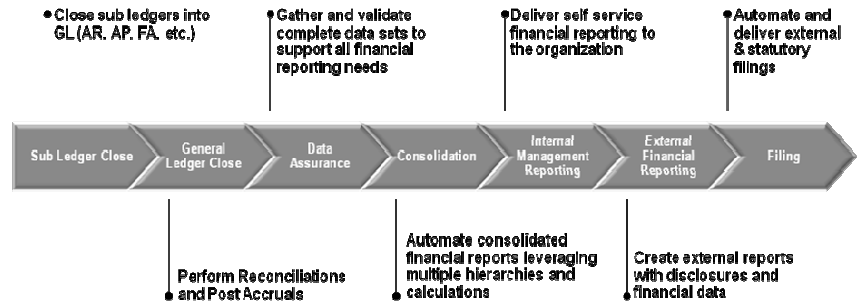

Most companies manage the extended financial close process using offline spreadsheets, emails and phone calls. This is cumbersome and time-consuming and can often slow the financial close and make it more error-prone. Another challenge is the wide diversity of the tasks themselves - the financial close can mean different things to different people. To a divisional controller it may mean closing out the sub-ledgers and general ledger at month end or quarter end and submitting the results to corporate. To a headquarters accountant the financial close is about collecting the details from the divisions, making final adjustments and performing the corporate financial consolidation and reporting. And, to the CFO and other finance executives it's about finalizing the results, announcing earnings and creating 10Q/10K's and other regulatory filings for the SEC and other stakeholders. The extended financial close and reporting process is all of the tasks and processes from closing out the sub-ledgers to creating and delivering financial filings to the SEC and other regulatory bodies – which involves many systems, departments and individuals. This process is very complex to manage and too important to control using “hope and email.”

Ultimately, without a centralized approach to task management, it becomes more difficult to deliver results quickly to both internal and external stakeholders – while ensuring compliance, auditability and accuracy. And, without an automated system for coordinating and tracking the entire process, identifying bottlenecks and areas for potential improvement, it's very difficult to shave time from the extended close and reporting process.

Oracle Hyperion Financial Close Management includes two modules: Close Manager and Account Reconciliation Manager.

Close Manager

Close Manager is a task management solution. Tasks can be anything that needs to be done during the close process – whether in the transaction system, general ledger, consolidation system or reporting system. Employees are assigned to each task and the tasks are given a due date relative to each period end date so it’s also easy to identify bottlenecks in the process.

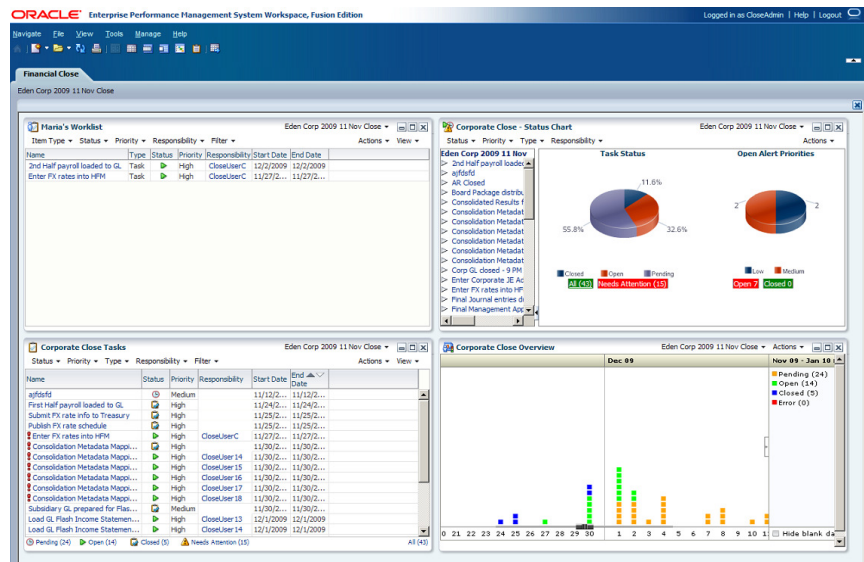

Example of the Extended Financial Close Cycle

Key Features

Functionality includes:

- An easy to use task scheduling and management feature to ensure the correct prioritization of closing tasks
- Pre-built, web-based dashboards for monitoring the progress of the financial close. Common calendar views, task list views, and Gantt views are leveraged for each user’s tasks based on security
- Active calendars and task lists that allow you to launch applications to complete tasks from the calendar itself
- An automation feature – allows you to schedule tasks for lights-out processing
- A roll-forward feature that allows you to quickly set up new financial close calendars based on the prior financial close

Account Reconciliation Manager

Account Reconciliation Manager is a module dedicated to the management of account reconciliations. It helps companies reduce risk by providing real-time visibility into the performance of reconciliations and ensuring that all reconciliations prepared are properly qualified. It also helps companies streamline and optimize performance by automating certain reconciliation tasks and supporting risk-based reconciliation cycles.

Key Features

Functionality includes:

- Balance integration using Oracle Hyperion Financial Data Quality Management ERP Integration Adaptor for Oracle Applications
- Mapping features to summarize low-level balances to the level appropriate for reconciliation
- Auto reconciliation of authorized zero balance accounts and balance comparison accounts
- Easy to use features for maintaining reconciliation assignments, including mass update and import capabilities
- Configurable frequencies and unlimited levels of approval
- Flexible formats adaptable to each type of account
- Powerful filtering and ad-hoc reporting capabilities
- Pre-built dashboards for monitoring status, aging, performance metrics, and compliance metrics
