Oracle Process Cloud Service

Organizations of today need to quickly deploy and adapt processes to meet the tactical and strategic demands that are required by the business. However, the cost and complexity of implementing infrastructure to support new tools has become a key inhibitor for adoption of modern business process management capabilities. To overcome this, organizations not only need to find a way to circumvent the traditional approach of how new technology is implemented, but they also need solutions that are more intuitive to use and offer a more compelling experience for the business users that are interacting with the processes.

Oracle Process Cloud Service is a subscription-based cloud service for process automation. Offering visibility and management of business processes, and a full lifecycle process management environment including development, test and production—with tooling and run time for process design, execution, monitoring and optimization - without the need to build and maintain an IT infrastructure. Allowing you to easily extend your existing SaaS and on-premise, filling the variances in the white space between your applications. Oracle Process Cloud Service can also enhance the digital engagement of your enterprise, providing out-of-the box mobile experience for your business processes.

Rapid, Business Friendly Application Automation

Oracle Process Cloud empowers Line of Business and Process Designers to rapidly build, customize and change custom business applications in a collaborative manner. Oracle Process Cloud comes prepackaged with process templates and starter patterns for quick and easy rollout of custom business applications. Users can build all aspects of business application including forms, decisions, data models and implement in a zero-code, declarative fashion.

Key features:

- Rapid Process Automation & Change via starter patterns, collaborative modeling, and zero-code, declarative design
- Business Friendly Forms Design to create responsive, dynamic web forms. Integration with business data supports design-once and run anywhere
Oracle Process Cloud Service works with:
- Oracle Integration Cloud Service
- Oracle Document Cloud Service
- Oracle Mobile Cloud Service
- Oracle Social Network

1. Powerful Rules Design that gives designers the agility to dynamically determine approvers and control process flow. Rules are driven by simple If-Then statements or can take the form of Excel-like Decision tables.
2. Richer Business Context for processes via business properties to capture requirements, issues and comments, and other information so that all stakeholders have the same big picture and necessary details. Reports capturing these properties and interdependency between data can be used for deep impact analysis across processes.
4. Full Lifecycle Management for managing application lifecycle including instant deployment, automatic versioning, and promotion from Test environment to Production.

**Multi-Channel Interfaces for Smarter Work Management**

Oracle Process Cloud provides modern, targeted, multi-channel (web, mobile, email) user interfaces to increase the effectiveness of the process participants. The brand new Process Cloud UI provides cloud-based collaboration and brings together people, process, content and data for effective decisions. Out-of-box routing patterns and algorithms such as skill-based routing provide smart work assignment capabilities.

Oracle Process Cloud user interfaces are designed to empower the power users, such as process owners and operation managers, by providing end to end visibility, with deep drill down from application to process to service to component. Beyond this, the UI brings unprecedented business agility via dynamic changes to in-flight processes and adhoc routing to power users. They can conduct root-cause analysis, identify bottlenecks, and provide guided navigation to quickly fix misbehaving processes. Rich out of box dashboards are provided for monitoring process as well as business performance.
Robust Connectivity to SaaS and On-Premise

Oracle Process Cloud Service provides rich integration to both cloud and on-premise applications. You can easily extend your Oracle SaaS applications; built-in auto-discovery and automatic identity propagation support across the Oracle SaaS and PaaS platform promotes cross-functional exchange of information in a hassle-free fashion and accelerates productivity. Secure and seamless integration with enterprise backend applications and systems in your data-center via Oracle Integration Cloud Service allows businesses to fully realize organizational benefits, productivity and return on investment.
Mobile Workforce Productivity for Business Users

Oracle Process Cloud Service brings productive work management to people on the go—anytime, anywhere and on a variety of mobile devices through native BPM Mobile Apps. Business users can organize and complete tasks, integrate with native mobile features such as Contacts and Camera, and can work in offline mode to be productive on the go. You can integrate with Oracle Mobile Cloud Service to rapidly create process-enabled mobile native applications. The Oracle BPM mobile application can be extended with new capabilities using REST APIs and Oracle Mobile Application Framework support.
