

ORACLE MOBILE FOR ORACLE FORMS

Extend your existing Oracle Forms applications to become first class Mobile First applications

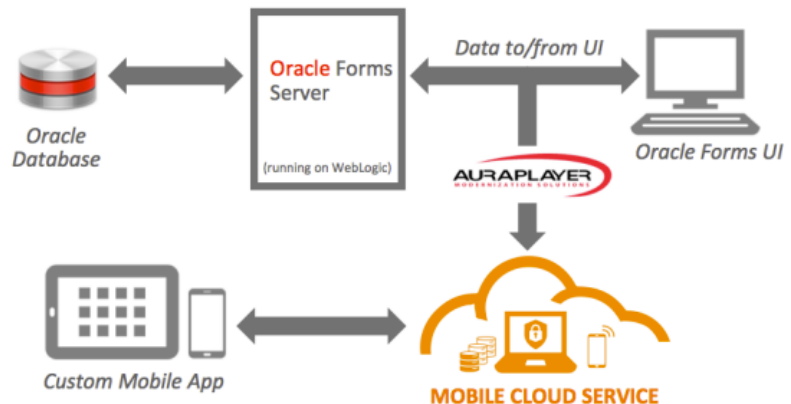

There are thousands of Oracle Form applications – applications that work perfectly well in the world of desktops, laptops and web browsers. But what about mobile? What about the millions of mobile users whose productivity would benefit, as much as 40%, from being productive anywhere, any time – by not being tethered to a desktop system? Mobile is the “new normal” that most people (especially millennials) expect.

KEY BENEFITS

- Extend Oracle Forms applications to mobile first without any changes to the existing application
- Reuse existing business logic
- Offer new functionality via native device services such as camera, GPS, voice recording, etc.
- Gain insight thru built in dashboards and analytics to measure usage down to specific APIs and custom events
- Deliver a mobile first user experience to your customers
- Support offline work capabilities

Oracle Mobile Cloud Service and AuraPlayer

Provide mobile connectivity to employees and customers by combining the rapid forms to web services capabilities from AuraPlayer with the powerful mobile service from with Oracle Mobile Cloud Service

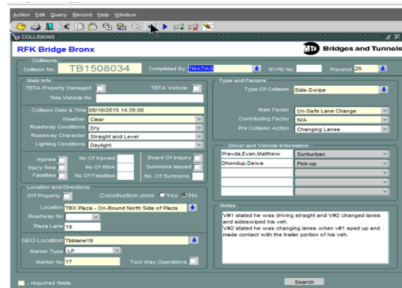

KEY FEATURES

- Rapid, wizards based development
- Automatically generated RESTful services
- Built in mobile services for notifications, user management and offline data
- Mobile analytics
- Offline capabilities
- Enterprise grade security

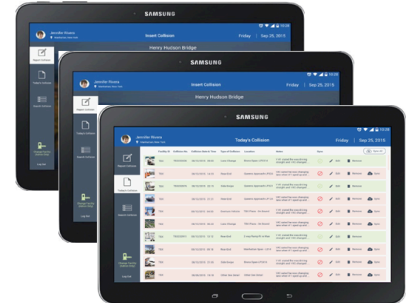

Mobile in 1, 2, 3

1. Record the desired scenario use of the Forms application with the AuraPlayer recording tool. (fields, buttons, etc.) This will automatically generate the RESTful services (SOAP is available too)
2. In Oracle Mobile Cloud Service, create a connector to these exposed services and publish them to the API Catalog that is hosted on Oracle MCS
3. Use our favorite mobile client development environment to browse and connect to the RESTful APIs directly, or use the provided SDK for iOS, Android, Windows, JavaScript

Before:

After:

**But Wait, There's More**

We've mobile enabled the desired functionality from the existing Forms application. That's just the beginning.

- As an on-device, mobile first application, you can now take advantage of local device services, such as the camera, GPS, audio recordings, etc.
- You can take advantage Oracle MCS support for offline data use and sync – so now you have an app that can work in offline mode (in a tunnel, on a plane, remote locations that don't have a network available)
- Gain insight and measure performance with the mobile analytics that Oracle Mobile Cloud Service provides. App usage, over time, down to the APIs – in easy to read dashboards
- Track custom events that can be built into the application – your choice, to further gain insight into specific business processes that are unique to your business

The Rest is Mobile History

There was no need to rip and replace. No need to start from scratch. In a matter of weeks, you will leveraged your existing Oracle Forms based applications to genuine mobile first applications. Welcome to the “new normal.”
