

Fact Sheet: Knowledge Transfer

Demystify the details surrounding your Oracle investments

The Knowledge Transfer service from Oracle Global Licensing and Advisory Services (GLAS) was built to solve a simple question from Oracle customers: “Can you help us better understand Oracle licensing rules and requirements?”

Learn about Oracle from Oracle

We collaborate with Oracle customers to deliver personalized training in a range of scenarios.

Needing to educate a wide range of teams

In complex organizations there can be many different people who need varying levels of understanding of licensing terms and policies. Oracle GLAS customizes interactive education tracks, to bring knowledge that supports better-informed usage and investment decisions.

Seeking clarity on existing agreements

Our starting point is usually to work directly with individual customers, who share their existing knowledge, needs and goals. Oracle GLAS then helps them to build up an understanding of key topics around their license and subscription agreements.

Solving specific knowledge gaps

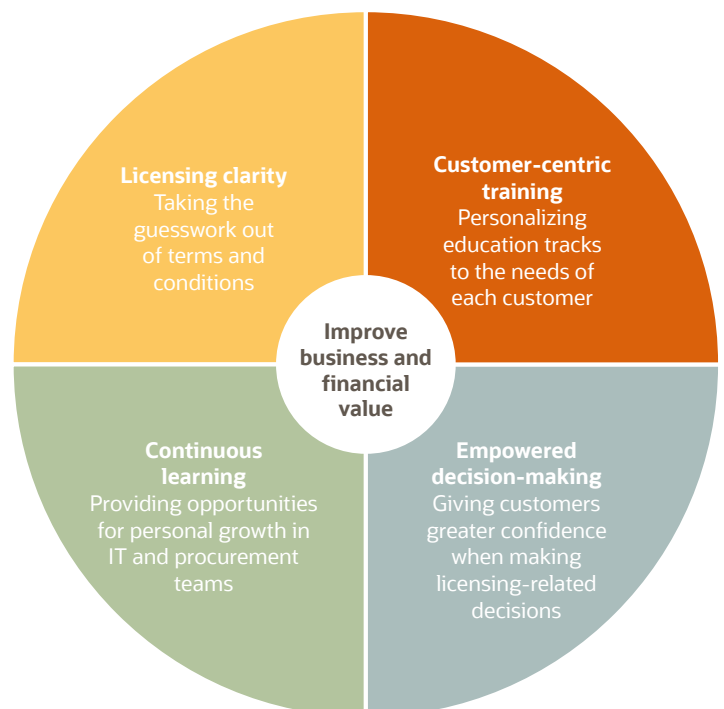

To deliver this education, Oracle GLAS brings together the deep knowledge of individual specialists with an extensive library of training materials. Content is growing over time as new courses are developed, and customized sessions are available based on customer requests. Example Knowledge Transfer topics include:

- Database (including Oracle Autonomous Database), Oracle E-Business Suite, PeopleSoft, and Siebel
- Broader areas like data recovery, partitioning, virtualized environments, or cloud contracting

The value of Knowledge Transfer

IT environments are increasing in complexity, which makes it essential to have a good understanding of licensing policies.

Picture an organization with hundreds of products from Oracle, across several business units (and potentially many countries), running in various environments. Combine that with staff new to software licensing, different purchases over time, and different metrics or measurement approaches. In cases like this, educational services from Oracle GLAS provides value to customers across four key areas:

A complete lifecycle of services for Oracle customers

Entitlement Intelligence

Knowledge Transfer

Deployment and Consumption Optimization

Cloud Investment Services

Investment Economics

ORACLE
Global Licensing
and Advisory Services
