Grant Management

Receiving grant and contract funding in today’s environment requires those that receive funds to have absolute control and visibility into how the funds are used to support their sponsored projects and programs. Whether you are an institution of higher education, a government agency, or a non-profit organization, the proper management of your grants is essential to ensuring the continuation of this important revenue stream.

**Grant Management at your fingertips**

Grant Management is part of Oracle Fusion Cloud Project Management solution and allows you to manage the complete post award process, from initial funding to close out. Grant Management also provides an integrated platform for managing the financial aspects and collaborating on your awards and sponsored projects, while complying with your sponsors and internal control, billing and reporting requirements.

Grant Management allows you to have complete visibility into all aspects of your awards. Quickly visualize the current spending status and drill into funding, budget, commitment, and expenditure details, as well as all related documents; all from any device, anywhere.

Build and access analytics and reports on award and sponsored project related activity using a comprehensive, user friendly business intelligence platform. Embed analytics within transactional pages or view as a dashboard on any screen.

**Key features**

- Innovative analytics that clearly portray the current spending status of each award
- Calculate, apply, adjust, account, and invoice indirect costs at institution, account, and award specific rates
- Prevent overspending by checking budgets at the point of entry
- Invoice sponsors in their desired format or through a letter of credit
- Comprehensive reporting platform to track all award funding, expenditures, and other related activity
- Fund projects from multiple awards
- Distribute payroll amounts using labor schedules

Figure 1. Quickly visualize current award spending status and important action items
**Hands-off administration, manage by exception**

Grant Management takes care of the details and allows resources to focus on strategic initiatives. Role specific, extensible work areas and watch lists alert users to items requiring their attention, while providing quick and easy access to all relevant information about awards, costs, revenue, and invoices when those details are required.

Quickly create awards from predefined templates or using standard web services and open interfaces. Preview and add funding for each period and sponsored project using an interactive funding matrix. Lastly, you can validate the award definition to ensure setup is complete.

You can be confident that only allowable cost categories are being charged and budgets are not overspent. Grant Management proactively identifies cost control issues and notifies users immediately. Indirect cost is automatically added to committed and actual costs and is included when ensuring transactions do not exceed budget.

**Analyze your grant performance**

Grant Management delivers real-time reporting capabilities that make it easy for administrators to stay on top of the performance of their organizations. The predefined multi-dimensional ad-hoc reporting platform allows for end users to create, generate, and publish the types of reports that their stakeholders require. From reporting on funding by department and source over time, to analysing awards closing in the near term versus the historical average; all types of end users will benefit from the ability to enhance their job performance with analytics.

**Don’t compromise your project management**

Grant Management is built in strategic conjunction with Oracle Project Management, part of Oracle Fusion Cloud ERP, which allows for uncompromised management and control of your sponsored and non-sponsored projects.

---

**Key business benefits**

- Decrease time staff spends on award administration
- Faster visibility into award financial status
- Comply with sponsor and internal control, billing, and reporting requirements
- Analyze award funding and performance
Awards are defined independently of projects, allowing for all types of sponsor specific information to be captured including award type and purpose, owning institution and department, keywords, CFDA numbers, terms and conditions, certification requirements, and sponsor or award specific indirect cost rates. Proper accounting is ensured by specifying account rules based on award attributes, to generate account journals for both direct and indirect costs. Award attributes can also be used to effectively route approvals of sponsored project expense reports, requisitions, and purchase orders to appropriate personnel.

Grant administrators can assign and fund one project from multiple awards and funding sources, whether external customers, internal organizations or user defined. Associating sponsored projects to multiple awards and funding sources allows for increased flexibility to manage different overhead rates, different funding periods, manage budgets, and control costs efficiently for each award and project combination.

You can manage your projects efficiently and effectively utilizing the full breadth of the Oracle Project Management solution. From defining and capitalizing assets, to scheduling and collaborating on project work, your project management and accounting needs are available regardless of the source of funding for the project.

Payroll amounts can be distributed to project or general ledger accounts using labor schedules, which specify the duration and percentage to track a person’s effort spent on award or project related work or any other work. Project and grant administrators can use the distributed labor cost information to satisfy audit, effort, or other reporting requirements.

**Automate mundane tasks with artificial intelligence**

Project managers and award managers can ask questions and issue commands through the Oracle Digital Assistant, which learns from the overall context to tailor interactions and smartly capture project-related information. A single, digital assistant seamlessly guides and routes users across your enterprise applications to access data and complete tasks faster, increasing your overall efficiency.

**Solution**

Oracle Project Management is comprised of the following modules:

- Planning, Scheduling and Forecasting
- Cost Management and Control
- Billing and Revenue Management
- Project Asset Management
- Grant Management
- Resource Management
- Resource Management Self-Service
- Task Management Self-Service

**Related products**

- Financial Management
