Joint Venture Management Solution Overview

**ORACLE JOINT VENTURE MANAGEMENT TRANSFORMS THE WAY YOU MANAGE YOUR JOINT VENTURES**

Oracle® Joint Venture Management is a complete and integrated solution that enables advanced management of multiple joint ventures to help ensure that costs and revenue are distributed to partners according to each partner’s share of ownership as defined in the joint operating agreement. Joint Venture Management enables companies to shorten the financial close window with automated joint venture processing, improve cash flow with accurate and auditable partner invoicing, minimize dispute resolution costs with a transactions audit trail, gain real-time visibility into the financial state of joint ventures by automating transaction processing and introducing role-based processes to manage exceptions and ensure compliance with the joint operating agreement.

Joint Venture Management enables you to continue to manage your business with global partners without the need to change your existing business processes. For example, if you generate invoices in your partners’ currencies, you can continue to do so with the capability of Joint Venture Management to process invoices in multiple currencies.

**SEAMLESS AND INTEGRATED SOLUTION**

Oracle Joint Venture Management within Oracle Fusion Cloud Financials enables companies to easily comply with the terms and conditions of joint operating agreements, seamlessly linking financial transactions with joint ventures and joint venture partners to ensure operations of the joint venture continue to work with minimal interruptions.

Joint Venture Management gives you a central place to easily define joint ventures according to the terms and conditions of your joint operating agreements. There is minimal setup because Joint Venture Management works with your existing Oracle Financials implementation. For example, you can quickly identify partners that are defined as customers and suppliers in Oracle Financials and associate them to one or more joint ventures as joint venture partners (stakeholders).

Oracle Joint Venture Management is used by companies in a multitude of industries including Engineering and Construction, Oil and Gas, Healthcare, Utilities, and Real Estate, to name a few. Oracle Joint Venture Management calculates each partner’s percentage share of each transaction based on each partner’s defined percentage of ownership and creates Receivables invoices, Payables invoices, and internal transfer journals to manage the share of costs and revenue for the partners.
HOW DOES JOINT VENTURE MANAGEMENT WORK

Manage Partner Contributions
Partner contributions are cash advances from joint venture partners to the managing partner to cover costs incurred by a joint venture. They represent the funding or capital contributions into a joint venture. The managing partner can request partner contributions throughout the life of the joint venture as outlined in the joint operating agreement. Joint Venture Management tracks the balances of each partner contribution as the distributions for costs are drawn against it. It also provides the ability to calculate new partner contribution amounts, create partner contributions, and create and track partner contribution invoices.

Capture Operational Measures and States
Operational measures provide statistics for the activities associated with the joint venture such as units of production, water usage, equipment hours, or employee hours. Joint Venture Operational Measures provides a single source of truth for the measures you track for your joint venture ensuring data accuracy when reviewing key metrics for your joint venture for accurate financial allocations, planning, and reporting. Operational states enable the tracking of a joint venture according to its phase, activity, or other type of status providing visibility to the distinct phases in its lifecycle.

Process Allocations
You record statistics for joint venture operations using Joint Venture Operational Measures. The recorded operational measures can then be used to create

Key Features:
- Manage operated and nonoperated joint ventures
- Manage partner contributions
- Capture operational measures
- Capture operational states
- Processing of allocations
- Calculation of overhead charges
- Identification of distributable transactions
- Calculation of each partner's share by transaction
- Receivable invoice adjustments with partner prepayments
- Receivable invoice generation for partners in a joint venture
- Payables invoice generation for partners in a joint venture
- Journal entries for internal partners share
- Joint venture adjustments to Project Costing
- Retroactive billing adjustments
- Reverse individual distributions for stakeholders
- JADE reporting
- Joint Interest Billing reporting
- Operational Reporting
statistical journal entries within Oracle General Ledger as a basis for processing allocations for your joint ventures.

**Calculate Overhead**
Overhead charges are indirect costs that are not directly tied to the production of a product or service. Overhead charges and management fees are a means for the managing partner to recoup some of the costs incurred by them to manage the joint venture. The joint operating agreement will specify how these charges or fees are to be calculated. These calculations will be done, usually as part of the month-end close process, to determine what the charges are and to invoice the joint venture partners for their agreed share of these charges.

Joint Venture Management enables companies to define rules to calculate overhead and ensures accurate calculation, distribution, and invoicing of overhead charges and management fees.

**Automatically Identify Joint Venture Transactions**
Joint Venture Management automatically identifies transactions for joint ventures from Oracle Fusion Cloud Financials Management. To help minimize any manual aspects of processing transactions, you set up rules to determine which accounts and related transactions are distributable to the joint venture partners. With such predefined rules, the managing partner can automatically and periodically identify eligible transactions for distributions. This removes the burden of categorizing each transaction as distributable, ensuring accurate and timely processing. Within Joint Venture Management, you can review and manage the transactions that have been identified for joint venture processing.

**Automatically Distribute Transactions**
Joint Venture Management calculates each partner’s share of each transaction. Based on the date effective stakeholder ownership percentages, Joint Venture Management automatically calculates the split and creates a distribution entry for each partner. Distribution entries contain information for audit and traceability purposes, including partner information, original transaction amount, project information, and the transaction date, which represents the date of service for the original transaction. It also includes other important details that help troubleshoot issues or resolve disputes over distribution amounts. Within Joint Venture Management, you can review and manage the distributions that represent each partner’s share of each transaction.

**Automatically Process Distributions**
Joint Venture Management automatically creates invoices to partners for cost and revenue distributions. An option is available to create internal transfer journal entries for internal partners instead of an invoice. Before invoicing joint venture cost distributions, partner contributions, if available, are drawn against to cover the distributions. Distributions for costs not covered by draws from partner contributions are billed to the partners through Receivables invoices and internal transfer journal entries. Distributions for revenue are processed as Payables invoices and internal transfer journal entries. With the automatic creation of invoices and internal transfer journal entries, companies can reduce the time and effort needed to process joint venture cost and revenue distributions for both internal and external stakeholders.

---

**Key Business Benefits**
- Flexibility to store, track, and control joint operating agreement terms and conditions
- Shorten the time to close the financial books
- Engage in joint ventures with global partners
- Improve cash flow with accurate and auditable partner invoicing
- Minimize dispute resolution costs with transactions audit trail
- Ensure joint operating agreement compliance through automated retroactive billing adjustments
- Accurate project capitalization and reporting for the managing partner
- Increased visibility into joint venture operations
- Improve productivity with automated/touchless transaction processing and reporting
- Improved decision making through operational reporting
- Easily track and report on carried interest agreements
**Project Costing Adjustments**
Joint Venture Management can send information to Project Costing. The reimbursable amounts invoiced to joint venture partners are sent to Project Costing, enabling the Project Manager to accurately budget and forecast gross and net amounts as well as realize accurate capitalized costs for a project.

**Rebilling**
During the lifecycle of a joint venture, there might be back-dated changes to the ownership percentage associated with the partners. For transactions that have already been invoiced to partners, Joint Venture Management efficiently performs retroactive rebilling. Thus, eliminating error-prone and time-consuming manual entries through automatic generation of partner credits and additional invoices.

**Reporting**
Joint ventures require timely reporting of information internally and to the joint venture partners. Take advantage of the available reporting tools to generate reports for reconciliation, auditing, operational information, and other purposes.

**Carried Interest Tracking and Reporting**
Joint Venture Management enables you to maintain the terms and conditions of carried interest agreements, their associated carried interest ownership definitions, process transactions based on the carried interest ownership definition and also track and report on the amounts that consenting stakeholders are carrying for nonconsenting stakeholders.
