# Connected Success: How Oracle Cloud ERP and Cloud EPM Drive Strategic Advantage

# Unlock the full potential of your cloud ERP with Oracle Cloud EPM

Your Oracle Fusion Cloud Enterprise Resource Planning (ERP) system forms the foundation of your business operations, streamlining workflows, automating transactions, and providing financial control. However, true financial excellence requires more than just processing transactions—it demands real-time insights, intelligent forecasting, and agile decision-making. Oracle Fusion Cloud Enterprise Performance Management connects seamlessly to your Oracle Cloud ERP to unlock AI-driven insights, enabling real-time decision-making to navigate change and help drive continuous growth.

By combining Oracle Cloud ERP's transactional data with Cloud EPM's advanced planning, financial consolidation and close, reporting, and analytics capabilities, organizations can achieve the following:

## 1. Aligned financial and operational planning

Manual spreadsheets and stand-alone financial planning solutions can limit financial visibility and agility. Oracle Cloud EPM enhances Oracle Cloud ERP by offering **AI-driven connected**

**planning, scenario modeling, and predictive analytics** that help finance teams to quickly adapt to market shifts and business changes. With real-time data and automated forecasting, organizations can proactively shape financial strategies rather than react to unexpected challenges.

“With Oracle Cloud EPM Planning, we now use automated processes and have reduced our reliance on spreadsheets to enable our finance team to spend more time on strategic and operational analysis.”

**Finance Director**, large investor-owned energy company

## 2. Faster, more efficient financial close

Closing the books in a timely manner and with high accuracy is a priority for every organization. Oracle Cloud EPM complements your ERP system by automating key financial close activities—such as account reconciliations, intercompany eliminations, and compliance tracking—reducing manual workloads and financial risk. This enables finance teams to close faster, with greater accuracy and transparency.

“In our experience, Oracle Cloud EPM Account Reconciliation was straightforward to implement and has provided significant process improvements. It is built on its own cloud infrastructure, so it’s easy to run and maintain without the need for a third-party cloud infrastructure.”

**Finance and HR Tech Lead**, multi-brand online retailer

### 3. Smarter liquidity and cash flow management

Cash flow is the lifeblood of any organization. With AI-driven cash forecasting and predictive analytics, Oracle Cloud EPM enables finance teams to monitor liquidity levels in real time, identify potential cash shortages, and help optimize working capital. By connecting real-time ERP financial data and AI-powered EPM models, predictive cash forecasting helps businesses maintain financial stability and make informed, proactive decisions.

# Why Oracle Cloud ERP and Cloud EPM work best together

## Seamless connection for unified insights

Unlike point solutions from third-party vendors, Oracle Cloud EPM works natively with Oracle Cloud ERP, leveraging all your financial and operational data to deliver deeper insights and unlock new efficiencies—no silos, no duplications. This provides fast deployment, consistent reporting, streamlined workflows, and better collaboration across departments.

“We use Oracle Cloud ERP and EPM as sister systems. They work together to give a holistic view of data to our end users so they’re not operating within silos.”

**Assistant VP**, IT Financial Systems, multinational telecommunications company

## Built-in AI

Unlocking AI's full potential requires high-quality, unified data that seamlessly connects strategic planning with operational execution. Oracle's connected Cloud ERP and Cloud EPM solutions provide a native data pipeline with built-in business context and semantic understanding, enabling rapid AI deployment across your enterprise. Unlike competitors who struggle with disparate data and inconsistent master data, Oracle helps ensure that AI-driven insights are built on a foundation of reliable, structured information.

## Start where you are

Oracle's cloud EPM suite offers unmatched flexibility. Implement EPM modules one at a time or deploy the full suite, in line with your business needs and priorities. Oracle Cloud EPM augments a Cloud ERP journey by delivering quick wins, such as financial planning based on best practices, streamlined financial close, or chart of accounts modeling in Oracle Enterprise Data Management, providing immediate business value without requiring a full-scale transformation.

“The implementation of Oracle Fusion Cloud ERP and Cloud EPM means that the business is ready for future growth and that next stage of our journey, where we unlock the potential of automation and efficiency. This allows the finance function to focus on more value-added activities and really drive the growth and future performance of the business.”

**Finance Transformation Lead**, ecommerce retailer

# Take the next step toward AI-driven finance
