8 DATE: FEBRUARY 07, 2022

This section outlines changes made to the Oracle PaaS and IaaS Public Cloud Services Pillar Document dated February 2022 and reflected in the Oracle PaaS and IaaS Public Cloud Services Pillar Document dated February 2022:

8.1 General Updates

- Applied a “Full” justification formatting to the documents content for a consistent formatting look and feel.
- General formatting changes to make indentation and spacing more consistent for an improved look and feel.
- General changes to wording and phrasing to make existing policy and language clearer and more concise on what it applies to

8.2 Scope (1)

- Removed Numbering for Scope. Section 1 is now “Oracle Cloud Security Policy”.

8.3 Oracle PaaS and IaaS Public Cloud Service Level Objective and Service Level Agreement Policy (2)

- Now numbered as section 3. This is to align this section with the same numerical order as in the Oracle Hosting & Delivery Policy Document.

- Renamed to “Oracle PaaS and IaaS Public Cloud Service Level Agreement Policy” as this section and the entirety of the Oracle IaaS and PaaS Pillar Document no longer houses Service Level Objective content or policy.
- Service Level Objective sections 2.1 through 2.7 (Category 1 through Category 7) are being relocated to a Program Document (found [here](#)). There are no material changes being made to Service Level Objectives from this change, and the commitments continue to be in full effect and applicable to all services who have them. This is strictly a location change of Service Level Objective content and policy. Due to the similarities between Service Level Agreements and Service Level Objectives, this change was made to better enable customers to distinguish and understand Service Level Objectives and consolidate their policy and content in a more visible and accessible location.

8.4 Oracle PaaS and IaaS Public Cloud Service Level Objective and Service Level Agreement Policy (2.7.1.6 through 2.7.1.8)

- Consolidated sections 2.7.1.6 (Data Plane Service Level Agreements), 2.7.1.7 (Control Plane Service Level Agreements) and 2.7.1.8 (Performance Service Level Agreements) under section 2.6 and renamed the section to “Services”. For services with multiple service commitments, we felt that consolidating the multiple sections that were spread throughout the document was confusing and made it difficult to understand what service commitments are offered. We changed this so each service has one section inclusive of all its service commitments. This change was made to improve searchability of the document and allow better understanding of a service’s commitment offerings by presenting it all in one place and removing redundant content. There was no material change to any policy or service commitment, only some language has been added to improve clarity into which policy and definitions apply to which service commitments for a better user experience.
- Renamed “Data Plane” service level agreements to “Availability” service level agreements. This change was made because some services do not have a data plane but offer an Availability SLA. This term is more inclusive of what is offered across all services and this change does not make any material change to the service commitments.
- Renamed “Control Plane” service level agreements to “Manageability” service level agreements to be more inclusive of the nuances between the different commitments and measurements used across all services. This change does not make any material change to the service commitments.
- Consolidated and restructured how SKUs/Services are listed in their tables. We felt condensing SKUs/Services with multiple service level agreement types into a single table matrix in the Services section allowed for better visibility into what service commitments are offered for each SKU/Service. There has been no material change or reduction to what Service commitments a specific service offers from this consolidation and reflects the same offerings from the previous Oracle IaaS and PaaS pillar document version.
- All Services previously referred to as “Category 7 Services” are now referred to as “Services”. Category specification is no longer necessary due to the removal of SLO content and “categories” from the pillar document.
- General language adjustments clarifying which policy applies to which specific services.
- Added SLA for Oracle Cloud Infrastructure - Application Performance Monitoring service.
- Added SLA for Oracle Cloud Infrastructure - Database Migration service.
- Added SLA for Oracle Cloud Infrastructure - Operations Insights service.
