Oracle Data Safe

Lower the cost of securing each on-premise Oracle Database by up to $1,500 annually and work as much as half of a typical database administrator's availability by leveraging Oracle Data Safe. All on-premise Oracle Database customers can now immediately deploy proven security controls using existing resources for only $200 per month* with Data Safe, a unified database security cloud service.

The problem

You need data to run your business, but that same essential data can introduce massive risk.

↑ 284% Data breaches on the rise
Breaches increased 284% YOY in 2019, with more than 20 reported breaches per day on average. Attack techniques are evolving but the target stays the same: data in databases.

76% Of orgs face a skills shortage
The gap between supply and demand for cybersecurity professionals has now surpassed four million, resulting in skyrocketing staffing costs that leave many organizations at extreme risk of a security event.

$230M Largest EU GDPR fine
Compliance regulations are expanding in number and scope, including regional privacy regulations like the California Consumer Privacy Act (CCPA). Fines present a serious financial risk.

The current state

Manual tools and scripts
This approach is extremely time-consuming, so security assessments are typically only conducted quarterly or even annually. When an organization does find an issue, it’s often too late.

Third-party point solutions
This approach is expensive due to costs including software licensing and support, complicated agent-based deployments, and requirements for on-premise system resources.

Do nothing
This is simply not a viable approach. Breaches and fines are too common, for organizations large and small, and the potential consequences for failure are too great to ignore.

A new solution

Oracle Data Safe
Oracle Data Safe greatly reduces the time and cost of securing Oracle Databases by unifying security tasks including:
- Security assessments
- User risk assessments
- Activity auditing
- Sensitive data discovery
- Data masking

In a single, extendable, unified cloud service that others:
- No complicated deployment
- No risk of shelfware
- No new infrastructure to manage
- No need for manual updates
- No need for professional services

"Oracle Data Safe unifies customer data security tasks on a single pane of glass."
—Ovum, 2019
Oracle Data Safe consolidates database security, Tony Baer

Data Safe can lower the cost and time spent on securing Oracle Databases because it unifies critical data security tasks in a single, unified cloud service. No special security expertise is needed to deploy or manage Data Safe.

Be up and running in 30 minutes. Close security and compliance gaps today!
