Flexible Data Models.
Zero Administration.
Automatic Scaling.
What Is It?

Application development with no hassle...

Oracle NoSQL Database Cloud Service is a fully managed NoSQL database cloud service for today’s most demanding applications that require low latency responses, flexible data models, and elastic scaling for dynamic workloads.

You can focus on application development without a lot of hassle. Avoid dealing with:

- Managing back-end servers
- Storage expansion
- Cluster deployments
- Software installation, including patches, upgrades, and backup
- Operating systems
- High availability configurations
Modern applications are **so demanding**.

Oracle NoSQL Database Cloud Service for modern applications addresses your most demanding business requirements.

Today’s applications need a NoSQL database cloud service that is always available, is scalable, and can respond automatically. It must provide an agile, flexible data model, with adaptability to changing requirements. And, it must be designed for extremely high reliability and ultra low read and write latency.

**High volume, small record sizes**
- Internet of Things
- Social networks
- User profiles

**Distributed variable data (JSON)**
- Product Catalogs
- Customer 360
- Personalization at scale

**Real-time applications**
- Fraud detection/scoring
- Gaming
Oracle NoSQL Database Cloud Service offers you so much more.

- Fully managed database—Easily connect to the cloud and deploy your application in minutes
- Elastic throughput—Scales as your workload increases
- Developer friendly—Provides a localized version for development, testing, and debugging
- Modern database features—Features ACID (Atomicity, Consistency, Isolation, and Durability) with relaxed consistency
- Fast and consistent performance—Has low latency at any scale
- Data model flexibility—Matches data models to application requirements
Oracle NoSQL Database Cloud Service is designed to meet your organization’s changing workloads.

- Scales dynamically to accommodate any workload.
- Applications can dynamically increase or decrease the provisioned throughput to meet variable customer demand. This elasticity helps to lower your overall cost when demand is low. And, it provides exceptional customer experience when demand is high.
- You can monitor the service usage through APIs to understand how much throughput your application is using. Then, adjust the throughput accordingly.
It’s friendly and it’s local.

Developers can download one of the language SDKs from the NoSQL cloud page to develop, and run their code immediately. It’s easy to convert your program from running locally to using the full power of the Oracle NoSQL Database Cloud Service.

The SDK includes many examples to help developers get acquainted, and get started on new applications to meet your customers’ needs.

The Oracle NoSQL Cloud Simulator can be downloaded which gives developers a local implementation of Oracle NoSQL Database Cloud Service, allowing them to connect to a datastore to test their application. It is easy to convert their applications to use the full Oracle NoSQL Database Cloud Service.
The more autonomous the better.

It’s self-driving. You define the throughput requirements, and Oracle NoSQL Database Cloud Service makes them happen.

It’s self-securing. You have protection from external attackers and malicious internal users.

It’s self-repairing. You benefit from automated repairs and minimal downtime.
Oracle NoSQL Database Cloud Service is the database for modern, web-scale applications.

Along with flexible data models, zero administration, and automatic scaling, here are a few more highlights of what Oracle NoSQL Database Cloud Service offers.

- Partial JSON updates—Only the required JSON fields are altered for each transaction, which increases performance and lowers throughput requirements.

- ACID—Atomicity, Consistency, Isolation, Durability... guaranteed. Relaxed consistency when needed.

- Table indexes—Indexes are updated as you add new data, always.

- Automatic upgrades—Oracle NoSQL Database Cloud Service is automatically updated, to make sure you have the latest Oracle NoSQL Database features.
You expect fast and consistent performance.

Oracle NoSQL Database Cloud Service is built on the latest server, storage, and networking technologies that ensure fast and scalable performance.

Even as the workloads increase, Oracle NoSQL Database Cloud Service is designed to maintain sub-10 millisecond, response times which ensures a great user experience.

Provision the read and write throughput needed to meet the most demanding workload velocities.

Developing for and deploying your application to Oracle NoSQL Database Cloud Service is quite simple.

#1 Develop (locally)
Create modern applications with an SDK and a simulation environment on your local system.

#2 Acquire
Sign up for Oracle NoSQL Database Cloud Service at oracle.com/cloud. Your service is available immediately.

#3 Connect
It is easy to then modify your application to connect with Oracle NoSQL Database Cloud Service.

#4 Go
Quickly deliver value to your customers.
