

# Enterprise Edition Security.

Robust protection for all your data.

## Peace of Mind

MySQL Enterprise Edition surrounds your key assets with robust protection. It goes way beyond what's available in MySQL Community Edition to ensure that business-critical data and systems stay safe. That gives you the freedom to focus on your business – not worry about security. And all the security features can be managed easily and centrally.

## Easier Compliance

Finding compliance costly and time-consuming? MySQL Enterprise Edition can help. It automatically protects your data with authentication, authorization, and encryption tools. There's also data masking and de-identification to safeguard personal data and help you comply with the most stringent, global data protection regulations.

## Lower Risk

With its tough firewall, strict user privileges and automatic security audits, MySQL Enterprise Edition helps you mitigate the risk of data breaches. With virtually no impact on performance. That alone is a good reason to upgrade from Community Edition if you're using it in a business environment.

### LINE Corporation boosts security with MySQL EE

*Upgrading to MySQL EE enabled Tokyo-based LINE Corp. to enhance data security and support future expansion by using the data encryption and digital signatures features of MySQL Enterprise Edition to protect sensitive data.*

*"The transition to MySQL Enterprise Edition was easy and straightforward. We only needed to change the binary of MySQL server but not the data. This allowed us to complete the process without affecting our business activities."*  
Kentaro Kitagawa, DB1 Team, Database Department, IT Service Center, LINE Corp.

## SAVE MONEY

- **CASHPOINT** is a betting enterprise founded in 1996 in Austria. It has an extensive network of shops, over 3,000 betting terminals, and an online betting platform. As well as providing robust security, MySQL Enterprise Edition reduces Cashpoint's costs. Besides annual license savings of €250,000, Cashpoint has reduced server costs by €150,000 and labor costs by €90,000. [LEARN MORE](#)

## SECURE ENTERPRISE NETWORKS

- **Sandstorm Enterprises** develops NetIntercept, a network security, monitoring and auditing device. NetIntercept relies on MySQL EE to identify network and security issues in the most demanding customer environments. "MySQL enables us to deliver an award-winning, cost-effective network analysis solution and the performance to meet the high volume requirements of our enterprise customers." **James Van Bokkelen**, President, Sandstorm Enterprises, Inc. ## BOOST PERFORMANCE

- Verizon Wireless is the #2 mobile carrier in the US. After upgrading to MySQL EE, the company saw much better response times during high concurrency use cases. It also achieved an amazing performance improvement of 1400% for the mission-critical employee portal, used by 78,000 staff. "MySQL has become part of our IT infrastructure, on which potentially more future applications will be built." Shivinder Singh, senior DBA, Verizon Wireless.

## Top Reasons to UPGRADE

Choose MySQL EE if your business still uses MySQL Community Edition for enterprise, web or mobile applications

- #1 Multiple advanced security features keep your data and systems safe from insider and outsider threats
- #2 Save time and money on compliance with automated checks and data privacy protections
- #3 Achieve your SLAs with no impact on performance due to security
- #4 Minimize the risk of data breaches with multi-faceted protection monitoring your data 24/7
- #5 Make the best use of your resources with an affordable, predictable subscription model
