Oracle Cloud National Security Regions (ONSR)

JWICS and SIPRNet have cloud, but not Oracle cloud...yet. Soon, your most important workloads—mission critical, physically isolated, data intensive, highly performant, hard to re-engineer—can move to a hyper-scale cloud on air-gapped networks. Oracle's National Security Regions will bring Oracle's greatest strengths—Database, Exadata, SaaS applications, bare metal systems, low latency networking—and provide the cloud-native capabilities you crave—pay for use, easy scaling and open vendor-agnostic technologies like containers and server-less.

Speaker: Rand Waldron, Senior Director, Oracle Cloud Infrastructure, Oracle

Location: Mount Vernon A

Its 11:59...Is Your Data Safe?

You want it all. Safe and secure data available for OLTP, analytics and AI for your mission. The ZFS Storage appliance is a converged solution, providing capacity, compute, network, system management and data services. Oracle's Zero Data Loss Recovery Appliance (ZDLRA) is a backup solution specifically designed to protect the Oracle Database. These integrated solutions combine Compute and Storage capacity pre-integrated to reduce the cost and complexity of IT infrastructure.

Speaker: Mike Stup, Director, Sales Engineering, Cloud & Infrastructure, Storage, Oracle

Location: Meeting Room 2

HRConnect: Migrating Peoplesoft to the Oracle Cloud - Benefits & Techniques

The U.S. Department of Treasury recently moved its HRConnect application (Peoplesoft) to the Oracle Cloud, allowing Treasury and many other federal agencies to benefit from this cloud-based implementation. Hear directly from Treasury about their experience in this transition. Learn how you can empower the "Migrate and Automate" strategy for Enterprise Applications of the future with new cloud manager tools, cloud native agility and use of Terraform to automate application migration to Oracle Cloud Infrastructure.

Speakers: Pat Bangalore, Lead Cloud Architect, Applications unlimited, Oracle

Chak Susarla, Senior Director of Technology, Strategy & Execution, U.S. Department of the Treasury

Location: Meeting Room 4

Cloud, Fog, and Mist Computing for the Mission

A large (Cloud) region is not sufficient for some organizations with regional, remote and/or disconnected environments. Some missions require Cloud regions and well-connected regional infrastructure (Fog) that contains Cloud capable resources and agile services to run localized mission workloads. In some cases, edge locations (Mist) need portable and rugged, smaller versions of Cloud-compatible resources with data-syncing capabilities. This session discusses how Cloud, Fog and Mist computing can be architected to meet mission demands.

Speaker: Mark Tatum, VP, Cloud and Mission Technology

Location: Meeting Room 3

Off We Go Into the Wild Blue Yonder: Air Force Transforms Talent Management

The United States Air Force (USAF) was managing its diverse 400,000 employee population with disparate, legacy on premise applications. USAF Chief Information Officer Dr. Michael A. Parker, was chartered to assess and analyze the current state HR processes with a view towards modernizing both the processes and the enabling technology that are critical to attracting, developing and retaining talent for the Air Force. In this session, learn how the Air Force and its partner Baker Tilly leveraged a rapid "show and tell" prototype methodology to redesign and harmonize processes, build stakeholder engagement and buy-in, and ultimately reimaged talent management for the United State Air Force.

Speakers: Dr. Michael Parker, Chief Information Officer and Deputy Director, Plans and Integration, Headquarters U.S. Air Force

Meghan Loomis, Senior Manager, Strategic Cloud Services, Baker Tilly

Location: Meeting Room 8 & 9

Oracle Blockchain Technologies and Real-World Government Project Examples

This session will demystify the enterprise blockchain and share a broad range of blockchain use cases in government organizations. Oracle launched Oracle Blockchain Platform in mid-2018, and governments across the globe have used it in pilot and production for civilian and national security applications. This session will describe the platform and share use cases related to customs, immigration, healthcare, base security, defense logistics, HR onboarding and security vetting, systems auditing, and others.

Speakers: Tom Plunkett, Consulting Solutions Director, Oracle

Mark Rakhmilevich, Senior Director, Blockchain Product Management, Oracle

Location: Congressional Hall C

Next Generation Oracle Fusion SaaS ERP configured for Federal Financials - Innovation Drives Exceptional User Experience

Come see the Next Generation in Federal Financials running on Oracle's Fusion SaaS application. You will get to view how Federal specific functionality such as Funds Management and the Budgetary Ledger is configured in the application, and how innovative technologies such as artificial intelligence, chat bots, and advanced analytics can be incorporated into the application for a better user experience and lower application sustainment costs.

Speaker: Brad Gladstone, Managing Director, Oracle Technology, Accenture

Location: Mount Vernon B
