Taking Control of Your Back Office to Transform Your Business

Open, agile solutions coupled with cultural change are keys to success
Digital Brands Are Disrupting the Traditional CSP-Subscriber Relationship

Digital disruptors and OTT service providers are inserting themselves between the CSPs and their customers and stripping away the value of CSPs’ customer relationships.
CSPs Need to Confront Specific Existential Challenges, Exacerbated by the Digital Disruption Undermining Their Business

**Economics**
In recent years, CSPs have lagged other industries both in terms of revenue growth and profitability improvement.

**Digital Transformation**
CSPs have been slower to digitally transform, but there is pressure to transition their business model into “digital lifestyle providers.”

**Customer Experience**
CSPs have been historically rated as providing a poor customer experience, as can be seen in the industry NPS scores.

**Brand Relevance**
Other consumer-focused digital brands are attracting customer and worker attention, eroding CSPs' relevance to end customers.
## Network Investments

Significant investment is going into network renewal including radio infrastructure and backhaul, but it opens up CSPs to new revenue opportunities and use cases.

5G wireless infrastructure investment will reach $24 billion by 2023\(^2\) though it is unlikely to generate additional service revenue for CSPs\(^3\).

### IMPLICATIONS

5G will have an impact on CSP back-office systems; need to move to platform approach to foster ecosystems.

## New IT Paradigms

Operationalizing 5G investments will require cloud native and virtualized deployment of applications, using agile devops to quickly create new solutions, automating operations to optimize the experience.

63% of CSPs will have begun virtualizing OSS/BSS functions by 2021\(^4\).

### IMPLICATIONS

Differentiation will come to those CSPs that leverage these concepts extensively.

---

4. “Omdia Survey Results on NFV Adoption” (Chris Silberberg, Omdia, January 2020)
CSPs Generally Agree Why Their Back-Office Needs to Be Modernized

IT System Deployment Evolving

Streamlining and automating operational processes and systems can yield significant economic results for CSPs: 10-30% improvement in back-office efficiency.  

Open Ecosystems Needed

5G networks will demand that multiple third parties have access to systems and networks, while maintaining security and control. This presents a challenge for the back-office, as traditional deployment models are either not truly open or do not allow for CSP control.

“5G’s faster operating pace requires OSS platforms that have the speed and scalability to support new 5G business models. Operators need rapid service order management, service creation and service activation, automated provisioning and fulfillment, and dynamic network management.”

- OMDIA  

But There Is a Lot of Organizational and Industry-Wide Inertia Slowing Down this Modernization

Legacy Systems

People and processes are aligned to current back-office systems, and the cost of retraining or recruiting necessary skills is significant.

Internal Challenges

Vendor solutions do not necessarily address cultural and transitional challenges faced by CSPs internally, impeding the realization of promised solution benefits.

Vendor-Customer Engagement

Moving from a product model to platform and solution model requires new ways of engaging customers with products from a broader ecosystem.

“Majority of OSS product vendor offerings (design, fulfillment and assurance solutions) are increasingly aligning their marketing with service orchestration and automation goals; but with little focus on CSPs’ internal environment challenges.”

- GARTNER -

CSPs Need to Prioritize Control and Cultivate Collaboration in the Back-Office

Digital End State
Plan back-office investments and process changes to enable a fully functioning digital service provider.

In-House Development
Collaborate with vendor partners to ensure that back-office applications and solutions fulfill CSP needs.

Change Management
Oversee vendor selection to optimize capabilities in line with CSP back-office needs to retain solution control.
Simultaneously, Modern Back-Office Systems Must Drive Towards Agility and Flexibility

**DevOps**
A DevOps approach to application and service creation is vital for the rapid speed at which CSPs will need to adapt to evolving business dynamics.

**Cloud Native**
Majority of digital transformation experts believe CSPs need to invest in cloud native OSS solutions, but only a small portion (4%) have actually begun this process.

**Open Digital Architecture and APIs**
TM Forum has developed its Open API Framework and Open Digital Architecture as ways to promote best practices in creating open ecosystems.

“60% of CSP respondents said they are still in the very early stages of incorporating DevOps practices and tools into their Operations”
– TM FORUM® –

“Over the coming year around 70% of CSPs plan to use cloud delivery for at least one system in the telecoms IT domain”
– OMDIA® –

10. “2020 Trends to Watch: Telecom Operations and IT” (Kris Szaniawski, Omdia, December 2019)
A Cultural Shift Toward Openness and In-House Collaboration Is Most Critical to the Vision of Modern Back-Office Systems

CSPs are realizing that they don’t need to own all aspects of their operations. Through open ecosystems, they can find the best partners for different capabilities.

Technology shifts will require new skillsets and open organizations. 90% believe that culture change is critical to realize ambitions for future-oriented back-office operations.11

“By 2022, 25% of CSPs will invest in in-house service and network management technology development including integration capabilities—compared to 4% in 2019”

- GARTNER12 -

Through Back-Office System Transformation CSPs Will Be Able to Better Control their Destiny and Monetize Significant Network Investments

**Agility and Velocity**
Modern, open OSS solutions give CSPs the flexibility and ability to deliver new services and use cases rapidly.

**Cultural Renewal**
Flexible, service-oriented and cloud-native OSS solution components provide tools necessary to accelerate cultural and skillset transformation.

**Monetize 5G**
Modern OSS solutions are key to enabling the value realization of significant 5G network investments.
Integrated Solutions Offer CSPs the Best Path Forward for Modernizing Back-Office Operations with Agility, Cost and Control

<table>
<thead>
<tr>
<th></th>
<th>Managed Services</th>
<th>Integrated Modular Solutions</th>
<th>Open Source</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Agility</strong></td>
<td>Speed and ease with which CSPs can make changes, regression test and deploy new use cases</td>
<td>Lower agility, higher cost and limited oversight, skills and control of solution as it evolves</td>
<td>CSP “owns” entire solution —slows agility and heightens risk and operational cost over time risking loss of control to “open source overdose”</td>
</tr>
<tr>
<td><strong>Cost</strong></td>
<td>Total cost of ownership (incl. SW licenses HW, maint., hosting, in-house development, etc.)</td>
<td>Assemble and configure solution from open, modular components maximizing CSP agility and control with optimized cost</td>
<td></td>
</tr>
<tr>
<td><strong>Control</strong></td>
<td>Control of deployment (incl, terms and conditions, resource allocation, prioritization, etc.)</td>
<td></td>

Key Criteria for Consideration When Selecting a Vendor

- Standards-based
- Open and modular
- Functional maturity
- Operationally robust
- Proven at scale
- Deployment flexibility
- Future-proof
Oracle Communications Service and Network Orchestration Will Help You Regain and Retain Control of Your Back-Office Operations

<table>
<thead>
<tr>
<th>Open</th>
<th>Future Proof</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Open standards-based APIs</td>
<td>• Supports current network and digital use cases</td>
</tr>
<tr>
<td>• Adheres to TM Forum Open Digital Architecture (ODA)</td>
<td>• Designed to enable future deployment scenarios in 5G and beyond</td>
</tr>
<tr>
<td>• Platinum member of Cloud Native Computing Function (CNCF)</td>
<td>• Evolving to support AI-driven, autonomous operation</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Scalable</th>
<th>Control</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Proven at scale: Individual CSPs processing &gt;2 million orders per day</td>
<td>• Optimum combination of agility, cost and control</td>
</tr>
<tr>
<td>• Oracle has over 200 CSP deployments using its back-office solutions to serve hundreds of millions of subscribers</td>
<td>• Choice and control of operational model: in-house IT and/or SIs</td>
</tr>
<tr>
<td></td>
<td>• Choice and control of deployment model: on-premise, private cloud, or public cloud</td>
</tr>
