

Software company review of GraalVM Enterprise on TrustRadius

Rating
9
out of 10

“GraalVM is very well suited for containerizing and running Java applications, thanks to its JIT compilation mechanisms and native Java support.”

“If you have a modern Java application using a framework such as Spring Boot, GraalVM is a good solution to standardize your environment while making use of the optimizations provided for Java applications so that you can reduce metrics such as start up time and response time.”
