

# Placing the patient at the center through a digital practice

A digital practice is a set of tools empowering providers to engage patients through personalized care navigation and orchestration.

**75%**

of physicians reported telehealth enabled them to **deliver higher quality care**<sup>1</sup>

**93%**

of providers believe video visits made patients **more likely to make appointments**<sup>2</sup>

## A strong digital practice is more than just video visits

Capabilities such as digital therapeutics, remote patient monitoring, and patient education in the digital health strategy can help organizations build a digital practice that meets patients where they are.

The number of people using digital therapeutics worldwide is expected to rise to **652 million in 2025** compared to only **22 million in 2020**<sup>3</sup>

**83% of physicians** expect patient-generated data from wearables, apps, and sensors integrated with care delivery will be **best practice in 5-10 years**<sup>4</sup>

## Empower patients to engage in their health

The Oracle Health suite of digital practice solutions, such as video visit and digital therapeutic capabilities, can help organizations empower their patients to engage in their health throughout life and reduce barriers to care.
