

Do you know about:

the **latest, modern** Import and Export Management for CX Sales?

and how it is used for **initial and incremental data loading**?

You can do more with Import and Export Management!

- **Load and update data** faster than before, even high volumes.

- **Avoid common issues** with input files by using pre-execution validations.

- **Define and monitor** import/export processes using a streamlined UI.

- **Automate recurring import/export** processes using REST APIs.

Administrators

should use Import and Export Management for initial and incremental data loading, with simplicity and speed. See the [Understanding Import and Export Management for CX Sales and B2B Service](#) guide for more details.

Users

can get the data needed to run your business. Appropriate legacy system data is used to prime your application and kept current and accurate going forward.

Tremendous benefits:

Lower administrative effort and higher data quality

Consistent data validation across the application

Easier administration of high-volume loads

Faster throughput of import and export processes

Try it and let us know what you think:
