

3 Ways Oracle Delivers Through DHS Cumulus

US Department of Homeland Security (DHS) components can acquire OCI, Oracle Cloud Marketplace services, support, training, and professional services through a \$567.9M single-award IDIQ with department-wide scope, task-order flexibility, and ordering from Aug. 12, 2026–Aug. 11, 2031.

DHS Challenge

Coordinate department-wide cloud buying

DHS components need a clear path to OCI, Oracle Cloud Marketplace services, support, training, and professional services while preserving component-specific outcomes. Without a shared vehicle, the processes for ordering, approvals, and pricing can become fragmented across cloud programs.

Control spend and pricing complexity

Cloud programs must include visibility into usage, spend, service eligibility, Oracle Cloud Marketplace purchases, and task order funding. Discount eligibility, non-discountable SKUs, public pricing changes, and professional service rates all require disciplined controls.

Maintain secure mission operations

Mission cloud workloads require FedRAMP-aligned services, identity controls, encryption, monitoring, metadata protections, CUI handling, incident response, accessibility evidence, and continuity planning across commercial and government cloud regions.

How Oracle delivers through DHS Cumulus

Single-award IDIQ cloud access

Cumulus gives DHS components a department-wide, single-award IDIQ with a \$567.9 million ceiling and task-order flexibility for firm-fixed-price or firm-fixed-unit-price execution under awarded scope and guidance. The ordering period runs from August 12, 2026, to August 11, 2031.

Tiered discounts and FinOps visibility

Oracle supports 25% first-year discounts, awarded discount structures, usage reporting, cost-and-usage data access, FOCUS 1.0 export, and monthly reconciliation so DHS can track consumption, validate pricing, and manage funding thresholds.

Governed OCI services and support

Oracle brings OCI capabilities, support escalation, training, professional services, deliverable management, and program operations that help DHS plan secure cloud adoption, document required evidence, and execute component task orders with repeatable governance.

CRITICAL INSIGHTS

Cumulus offers a vehicle for OCI, Oracle Cloud Marketplace services, support, training, and professional services, backed by governance for task order execution.

Contact Oracle

Bring a cloud requirement to Oracle and the DHS Office of the Chief Procurement Officer (OCPO) Cumulus Contracting Office to start task order planning and confirm scope, price, approval path, and next steps.
