

# High Volume. High Velocity.

Millions of ERP transactions every hour.  
Why scalability and performance in the cloud matters.

Is your current or planned ERP system capable of handling many transactions simultaneously? Recent tests highlight Oracle's cloud capabilities to process hundreds of millions of data transactions every hour.

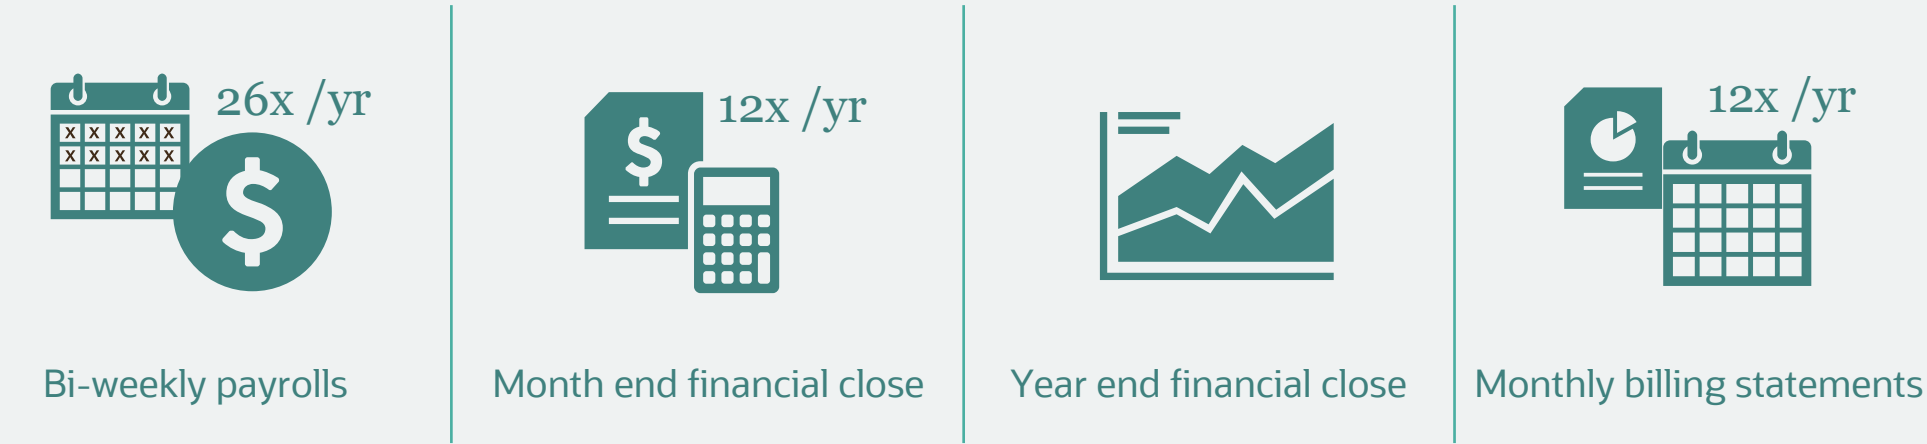

## One transaction spawns multiple transactions

Fact: 1 Transaction can spawn 20 to 50 additional transactions<sup>1</sup>

## Periodic events drive transaction volumes

## Tests demonstrate very fast and very large transactional volumes and rates

### Test Parameters

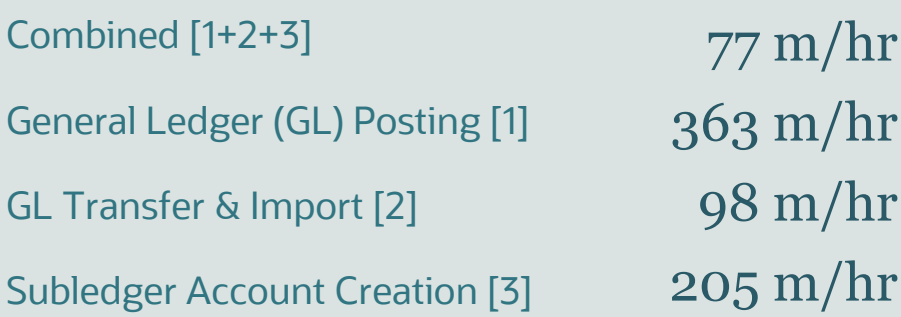

(measured using the baseline business model)

#### Accounts Receivables (A/R)

### Test Results

#### Throughput Transaction Volume in One Hour

#### Accounts Payables (A/P)

#### Baseline Business Model

### Big News!

## For Massive Transaction Volumes Oracle Cloud Delivers Unparalleled Performance and Scalability

The growth of transactional data volume in ERP systems continues its rapid pace. The need to process transactions quickly is more important than ever. Learn more about Oracle's performance and its cloud solutions at:
