G2 recognizes VirtualBox as a Leader in the Spring 2021 Virtual Desktop Infrastructure Report.

Open-source virtualization software with vibrant community participation, combined with Oracle development and support.

Review Star Breakdown

Overview
VirtualBox is a program that helps to run virtual devices on the same operating system. I like this program because I don't need to install different operating systems when I want to learn about them, but rather install them virtually using VirtualBox and check them first. It is also a useful tool to run Android virtual devices when developing android applications. The application is simple and easy to use.

Satisfaction Score

- Users rate Oracle VirtualBox 4.0 or 5.0 stars.
- I like how easy it is to fire up the machine and go about my testing procedures for our software. The VirtualBox behaves exactly as a Windows machine on my Mac, and it saves me from having to purchase Windows hardware to carry out my tests. VirtualBox is one of the best solutions for virtualized environments. It is an open-source software and a powerful tool to test the deployment of any new operating system and applications. In addition, it works on virtually all operating systems (Windows, Linux, OS/2), OpenBSD and Solaris. It is very simple to use, with few clicks, you are already enabled to create your virtual machine.

VirtualBox is the perfect tool to virtualize machines and run various operating systems such as: Linux distributions, Windows in different versions, Mac, among others. The management system is easy. USB 3.0 support is great and allows for adequate flexibility. With VirtualBox I can have multiple systems in the same computer, thanks to this I can plan performance tests and evaluate features in programs that work better in one system or another. VirtualBox has an extensive community of users that help you solve any problem and since Open Source is free, you can make modifications according to your taste.
