What is Oracle Predicts and Why Do I Need It?

Oracle Predicts is a contextual solution that increases campaign relevancy by capitalizing on trending content and the associated inventory in real time.

15B+ URLs  
Crawling over billions of URLs provides a wholistic understanding of trends

31 Languages  
Stay ahead of the conversation in multiple languages

Relevant  
Dynamic contextual segments uncover and align messaging to trending content that’s adjacent to original seed terms

Four benefits of Oracle Predicts

1. Increase relevancy with dynamic content alignment. Predicts places your brand at the center of the conversation by optimizing segments against relevant content daily and capturing impressions as that conversation evolves.

2. Achieve your reach goals and drive scale with automated optimization. Align with an evolving conversation to capture far greater impressions, exceeding the reach of static segments.

3. Confidently ensure campaign relevancy, maximizing every dollar. Predicts maximizes campaign ROI and avoids impression waste by finding and aligning to trending content that’s adjacent to your original seed terms.

4. Solve for the unknown. On the open web, trends change in a moment’s notice. With a tool that solves for the unpredictable nature of the media cycle, stay a step ahead of trending content.
