Oracle Playbook

UTILITIES

Unlock Utility Transformation

Enabling a resilient and modern organization for the journey ahead

Utilities

Leading utilities will thrive by rapidly adapting, creating new revenue streams, and offering value-added services in a shifting industry. Increased automation and use of AI are essential to overcoming operational challenges, making better decisions, and delivering better experiences.

Oracle **Playbook**

Key imperatives for utilities

1 Navigate the energy transition and changing power demand

2 Develop secure, scalable, and automated systems to support innovation

3 Promote sustainability and increase reliability while serving all communities equitably

Forces shaping the utility industry

INDUSTRY CHALLENGES

Navigating the energy transition
Siloed operating models create lack of business agility and stifle innovation, limiting the ability to capitalize on sustainable development.

Resiliency
Lack of real-time operational intelligence to effectively de-risk aging assets and properly plan for next-generation infrastructure to manage renewables.

Reimagining the customer dynamic
Limited insights to manage evolving customer preferences, build new business models, and expand new B2B and B2C channels.

De-risking critical infrastructure
Lack holistic view of cyber and physical threats, which lead to compromised systems, increased risk, poor reliability, and lower customer satisfaction.

Net zero compliance
Inability to navigate shifting financial, operational, and regulatory battle lines due to fragmented planning and strategy systems, leading to poor performance.

VISION OF SUCCESS

Click on a section to learn more.

1 Create the next generation of energy

2 Improve resiliency and reliability

3 Turbocharge customer interactions

4 Secure everything

5 Evolve profitably

6 Starting your journey

1: Create the next generation of energy

The global shift to electric means that traditional energy suppliers must deliver on today's needs while planning for tomorrow. This requires new products and services and close attention to changing government mandates.

Recommended actions:

- Use customer demand insights to make better decisions
- Implement smarter ways of planning
- Support hybrid power systems
- Evolve pricing and billing for the modern era, including time-of-use pricing

How to get started:

- Improve segmentation capabilities to gain a more granular picture of demand
- Identify data sources for accurate profitability analysis
- Determine the right KPIs to measure investments and outcomes

Oracle capabilities enabling strategic goals

Customer communications	Asset operations	Utilities operations	AI	Energy efficiency	Digital engagement

2: Improve resiliency and reliability

Real-time insights combined with contextual and geophysical data can de-risk aging assets, improve reliability, enable peak and load shifting programs, and build a next-generation interoperable infrastructure to manage renewable disruption.

Recommended actions:

- Invest in modernizing your technology stack to a real-time, connected cloud capable of secure communication to edge and customer devices.

- Improve system load forecasts through AI.

- Use AI agents to analyze historical and real-time energy consumption data and weather forecasts and adjust energy distribution accordingly.

How to get started:

- Identify aging assets and create a plan for modernization.

- Equip systems with sensors to increase intelligence and insights.

Oracle capabilities enabling strategic goals

Asset management	Utilities operations	Enterprise communications	Data insights	Agentic AI

3: Turbocharge customer interactions

Efficiently access your target market, track omnichannel engagement, enable AI responses to standard inquiries, both internal and external, turbocharge customer service, and closely manage discounting and margins.

Recommended actions:

- Improve customer behavior predictions to improve operations – such as churn and program participation.

- Improve anomaly detection so that customers get more accurate bills with fewer service calls.

How to get started:

- Use generative AI to personalize customer communications.

- Leverage AI to create relevant next-best offers.

- Segment customer populations and use predictive analytics to get ahead of payment risks.

Energy reports and recommendations	Demand management	Utilities operations	Generative AI	Peak utilization

4: Secure everything

Implement converged, intelligent cyber-resilience planning with integrated data and cyber-physical security, along with governance strategies across security domains, to rapidly identify, prevent, and mitigate threats.

Recommended actions:

- Use secure cloud technology for always-current compliance and threat protection.
- Implement modern employee health and safety systems to keep workers safe.
- Track and measure adherence to changing compliance needs.

How to get started:

- Understand key regulatory and compliance requirements for consumers and workers.
- Learn about modern technologies that can improve worker safety, such as sensors and VR/AR.
- Plan a cloud modernization for aging systems that expose security risks.

Oracle capabilities enabling strategic goals

Asset operations	Employee health and safety	Cloud	Training	Governance, risk, and compliance	Utilities operations

5: Evolve profitably

Refine processes to communicate and deliver greater project profitability. Focus on efficient execution and advanced analytics that show where you are making and losing money.

Recommended actions:

- Use AI to optimize asset maintenance.
- Reduce unnecessary dispatch calls through better, more intelligent anomaly checks.
- Improve profitability through holistic cost analysis in areas such as route optimization and overtime.

How to get started:

- Analyze existing financial and operational data.
- Use predictive analytics to improve profitability and forecasting.
- Get key pieces of data together that show real profitability—spanning procurement, human resources, travel, supplies, and more.

Internal questions to get going

Business drivers and objectives

What are your top customer experience priorities for the next
12–24 months?

How do you currently measure customer satisfaction and engagement?

What challenges do you face with customer service or digital engagement?

What are your goals for customer self-service adoption?

Utilities operations

How are you managing increased complexity from renewables, storage, and EVs?

How do you ensure resilience and reliability during extreme weather or changing demand?

Where are the biggest inefficiencies in your network (e.g., leakage, maintenance, workforce)?

What challenges do you face in adopting predictive maintenance at scale?

What innovations are you exploring to optimize field operations and emergency response?

Finance and planning modernization

Are we good at budgeting and scenario planning?

What are the biggest regulatory and compliance risks we regularly face?

Do we have a clear understanding of profitability?

System architecture and data

Do IT silos hurt your business?

Which customer information and billing systems do you use?

How easily can you access and share data within and outside your organization?

Do data silos hinder your ability to deliver a seamless customer service and experience?

How do you expect AI and analytics to improve operations and efficiency?

Four key elements to your success

Leadership defines vision/urgency for AI adoption, alongside commitment to customer success and continuous improvement.

People

Processes

Oracle Playbook

Processes are continually reimagined to **streamline** operations and **empower** people to focus on higher-value work.

Oracle provides everything you need to deploy best-in-class applications and continuously innovate – with AI and agentic at the core.

Systems

Data

Benefit from a unified data model provided by Oracle's end-to-end technology stack and invest in data governance.

Oracle Utilities – Integrated energy utility

Why Oracle?

Complete Suite

Best-of-breed apps designed and built based on customer needs—with AI throughout.

Industry-specific apps, finance, HR, supply chain, manufacturing, marketing, sales, service, and analytics built to work together.
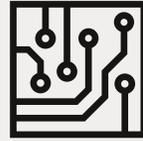

Best Cloud Technology

Next-generation Oracle Cloud Infrastructure (OCI) with the performance, security, and availability to run your mission-critical operations.

Cloud regions worldwide for commercial and government needs.

Award-Winning Design

Award-winning consumer-grade+ user experience built with Redwood Design System.

The same tools for all developers to easily personalize, extend, and build applications.

Self-learning and self-improving applications.

Committed to Your Success

Oracle Customer Success Services helps you maximize your cloud investment with proactive support, expert guidance, and comprehensive tools and best practices.

Committed to your success

Oracle Cloud Success Navigator

Achieve Cloud transformation objectives
Cloud success starts with projects that are delivered on time, on budget, and done right the first time. Leverage standards from +10K implementations with AI guided actions, role-level ownership, and accountability across your team, Oracle, and your SI to achieve success faster.

Confident design decisions deliver exceptional results
Oracle Modern Best Practices and Oracle University modules establish knowledge of your Oracle solutions and help reduce customization risk. Hands on application practice through Starter Configuration helps drive decisions from experience.

Increase your investment's value with AI and innovations
Help reduce cycles and costs while AI identifies gaps and expedites planning. Consolidated release materials with customizable Adoption Roadmaps drive business and IT alignment.

Leverage AI every step of the cloud journey
AI agents shape your journey and create tailored strategies for ongoing evolution. Empower teams and increase satisfaction by directing resources toward value innovation not tedious administration.
