## Unify your climate change data

Configure, source, store, and analyze climate change data to meet statutory requirements and for accurate reporting and business decision-making. Use a [comprehensive, flexible data model](#) that can adapt to changing climate change reporting requirements. Gain a single source of truth with the ability to drill down on climate change calculation results at various levels, including legal entity, emission category, line of business, business unit, counterparty, and asset class.

## Gain a holistic view of climate change impacts and operations

Easily [calculate greenhouse gas \(GHG\) emissions](#) across the entire organization and your value chain to confidently disclose on forward-looking metrics like financed emissions, facilitated emissions, and avoided emissions etc. based on The Partnership for Carbon Accounting Financials (PCAF) guidelines. Embed climate change risk into overall enterprise risk management frameworks for credit, liquidity, reputation, and market risks. Use a climate rating framework, at the customer account-level, that includes 15+ qualitative and quantitative variables to perform portfolio-level analytics and easily link climate change risks and opportunities with financial impacts. Break down informational silos and support complex business decisions surrounding customers, products, business policies, targets, and processes.

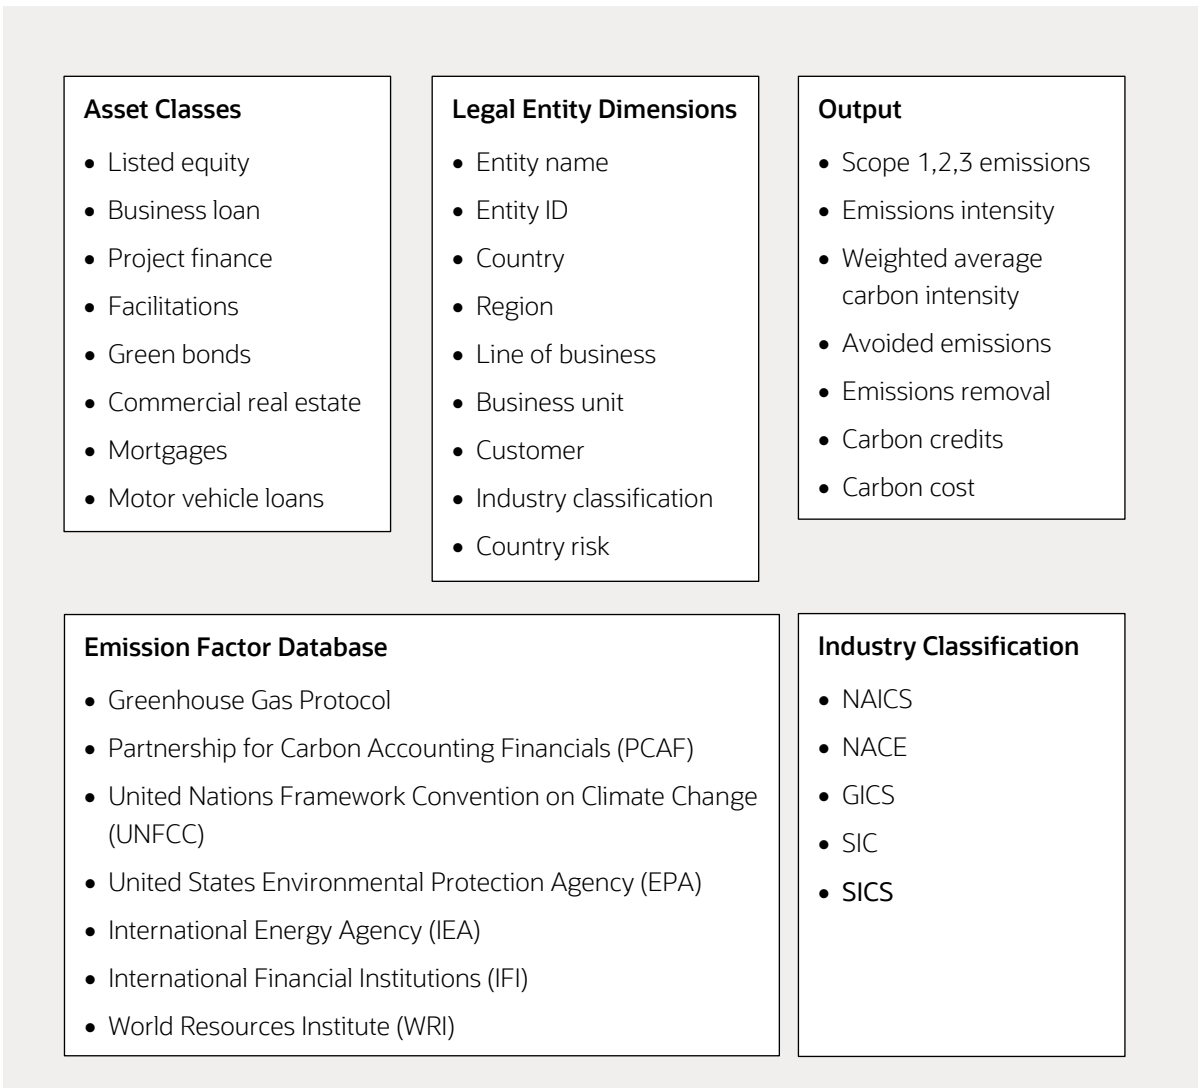

## Simplify climate change disclosure reporting

Use a [single solution for climate change statutory, financial and management reporting](#) requirements, including frameworks and standards across US Securities and Exchange Commission, European Sustainability Reporting Standards, and International Sustainability Standards Board. Access more than 100 pre-built, cross-jurisdictional climate change reporting disclosures, analytics, and visualizations that are continuously updated as reporting standards evolve.
