

Get Smart About Cloud Security

Here are some **clues** that can help make your scavenger hunt for a secure cloud provider just a bit easier.

CLUE 1

Know who is looking after your data.

Find a cloud provider with a history of secure data management and an established reputation as a global leader in security—all with state-of-the-art technology and dedicated cloud security experts.

CLUE 2

How should business critical data be protected?

A modern cloud provides unified global access controls across your business —so that only qualified users have access to confidential data.

CLUE 3

Reduce the risk of your confidential data being shared.

A modern cloud provides secure data isolation so your data is safe and protected in the cloud and never comingled with other customers' data.

Worldwide security spending on information security has reached over **\$71.1 billion** ^[1]

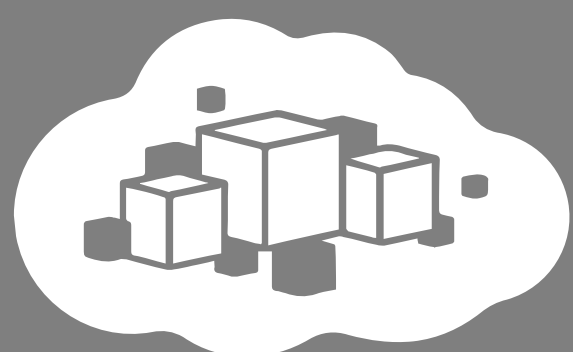

The average cost of a data breach to a company is **\$3.5 million** ^[2]

Each year, **50%** of Fortune 1,000 firms experience a breach of confidential employee records ^[3]

You shouldn't trust your data to just anyone. Trust a modern and secure cloud provider that has a presence around the globe and is known for advanced security solutions, data security, and world-class compliance.

Choose Oracle as your proven, experienced cloud partner you can count on for the long-term.

Oracle Cloud.
A Secure Cloud for
the Digital World.
