Cybersecurity is Real

$6 trillion
The estimated annual cost of cybercrime damages worldwide by 2021

Cyberattacks are the fastest growing crime

The average cost of a data breach is $3.92 million as of 2019.

Many businesses never recover from the fallout

Don’t be fooled by third-party support providers and self-maintenance security methods

There’s no patching in “virtual patching”
Virtual patching is a workaround that doesn’t actually patch or update your software.

There’s no patching in “virtual patching”

Security patching is essential for securing enterprise software, including Oracle’s. If you don’t own the code, you can’t access or update it. That leaves your software open to attack and your business open to risk.

Temporary solution
Neglects root problem
Ignores full scope of vulnerabilities

Susceptible to internal breaches
Minimal visibility into network threats
Ignores actual security in the software

“Holistic security” isn’t whole; firewalls aren’t fireproof
Perimeter-focused security strategies leave your software open to attack.

Self-maintenance = potential liability
Doing it yourself cuts your software off from critical security updates.

Powerless to (legally) fix vulnerabilities
Unable to access new patches and updates
Limited resources to reliably maintain and secure

Inadequate security updates
Inadequate security fixes
Inadequate protection against vulnerabilities

Third-party support and self-maintenance can’t protect you—the real solution is at the source

Is Your Software Vulnerable To Cybercrime?

Third-party support and self-maintenance can’t protect you—the real solution is at the source

Oracle Support is the only way to guarantee mission-critical security updates and protection for your Oracle software.

Oracle creates and owns the source code
Oracle provides security at every layer
Oracle has the tools, experience, and knowledge

Get more from Oracle.
When your business is on the line, there’s no substitute for trusted, secure, and comprehensive support.

Oracle Support is the only way to guarantee mission-critical security updates and protection for your Oracle software.
